

‘Beating The Odds To Build Indian Telecom Products’

From a boarding school in Raipur to doing pioneering work on the world’s first Verilog simulator, laying the groundwork for electronics product development in India, and building a company valued at over ₹200 billion, Sanjay Nayak’s journey rivals the drama of a Bollywood film, with its many twists and turns. EFY’s Yashasvini Razdan traces this remarkable tale of resilience and optimism, beginning in the town of Raipur, where it all began.
