

“India Will Have Two Semiconductor Wafer Fabs By 2030 But Needs To Put Equal Focus On Semiconductor Product Companies”

CHRIS MILLER
AUTHOR, CHIP WAR

DR SATYA GUPTA
PRESIDENT, VLSI SOCIETY OF INDIA

‘Chip Pe Charcha,’ an initiative by the VLSI Society of India, aims to unite global leaders in semiconductor and VLSI design. Dr Satya Gupta, President of VSI, engaged in a thought-provoking discussion with Chris Miller, the acclaimed author of the 2022 bestseller ‘Chip War.’ This insightful exchange promises valuable perspectives on chips and semiconductors. Do not miss it.

SG: How has the semiconductor industry changed since your book came out two years ago?

CM: The semiconductor industry has undergone significant changes. First, the surge in artificial intelligence has intensified the demand for AI-related chips, and companies are leveraging AI to enhance design and manufacturing processes. Second, geopolitical ten-

sions, particularly between the US, China, and Taiwan, have fragmented the industry, resulting in distinct markets focused on China and the rest of the world. Third, numerous governments, including those of the US, Europe, Japan, India, and South Korea, are heavily investing in local semiconductor manufacturing, leading to substantial global investment in this sector.

SG: With numerous new announcements for fabs and ATMP factories worldwide, will supply soon outpace demand?

CM: This depends on the type of products. For GPUs, there will be a continued severe shortage due to high demand from AI applications and the limited availability of innovative fabs. Semiconductors for electric vehicles are also in high
