

circuitries via different signal domains during development, including high-speed buses (USB, PCI Express, MIPI, etc), multi-channel RF interfaces (radio or radar), DDR memory interfaces, complex power management units, and even simple control and programming buses (I2C, SPI, etc). Versatility is offered with highest integration of multiple instruments in one, offering 16 logic channels and precision power analyser with four pairs of voltage and current channels.

Programmable ammeter/voltmeter

SMP48 and SMP96 are MECO's recently launched 4-digit programmable ammeters/voltmeters, with DC/AC true RMS. The meters are highly reliable and can give accurate measurements of electrical parameters. These are designed to be programmed on field as per required current transformer (CT) shunt primary value by any operator. This enables using the same DPM for different CTs and potential transformers (PTs).

Key features include:

1. TRMS using MCU
2. Bright display with red LEDs
3. User programmable CT/shunt primary value
4. Auto selection in decimal points
5. Over-range indication
6. Sampling rate of three samples per sec
7. Frequency response of 40Hz to 400Hz

Digital multimeter

Kusam-Meco introduces an average sensing digital multimeter (model KM-711). It has 3-5/6-digits 6000 counts and 3-digits 999 counts dual-LCD display with 5/sec update rate. It can measure fundamental voltage and frequency of most variable frequency drives. It has 6kV transient protection, and high basic accuracy of 0.3% (V DC) and resolution 0.01mV DC. It can measure digital logic level frequency up

to 300kHz. Voltage measurement is up to 1000V AC/DC with high impedance, and noisy high voltage AC frequencies up to 10kHz in dual display.

SOFTWARE

KiCad library

Digi-Key Electronics has tagged open source Digi-Key KiCad symbol and footprint library with 1.0 status on its GitHub Repository. Version 1.0 is a major milestone for library development, indicating that it is complete and has all major features. It is considered reliable enough for general release to engineers, designers and customers.

Digi-Key collaborated with KiCad user community to refine library management processes, data included with parts, and worked extensively to improve the quality of symbols and footprints. Each part is infused with Digi-Key descriptions, part numbers and more data that allows for easy bill-of-materials (BOM) resolution and uploading to Digi-Key cart or BOM tool.

R-Car virtualisation support package

Renesas announces R-Car virtualisation support package that enables easier development of hypervisors for R-Car automotive system-on-chip (SoC). The support package includes both R-Car hypervisor development guide document and sample software for use as reference in such development. Software vendors who develop embedded hypervisors required for integrated cockpits and connected car applications can make use of this package.

MISCELLANEOUS

People mobility management solution

COSEC VYOM from Matrix Comsec is a

people mobility management solution, based on cloud technology that allows users to use application, hardware and infrastructure as a service. Cloud-based time and attendance system addresses solutions to the outlined issues of productivity, security and efficiency by providing ubiquitous, cost-effective, secure and on-demand network access.

Key features are:

1. Access from anywhere, anytime
2. On-demand scalability in sync with organisation size
3. No capex, maintenance and upgrades for IT
4. Pay per usage
5. Easy access through any Internet-enabled device
6. Multi-level data encryption and protection
7. Email and SMS notifications
8. Backup, archival, retrieval and migration

Power supplies

RECOM'S latest 15W and 20W AC-to-DC power supplies are designed for low-power Internet of Things (IoT) and household applications. Based on the footprint of the compact RAC10-K modules, these modules feature high-efficiency over a wide load range and minimal standby power consumption.

RAC15-K and RAC20-K series are PCB-mountable AC-to-DC modules with ultra-low energy losses especially in light-load conditions. This makes these ideal for always-on and standby mode operations needed for IoT and smart home devices.
