

play music, access speed dial and voice dial, and receive and make calls hands-free. You can play supported video files on the screen, too. The device is available for ₹ 15,990 on www.sony.co.in

Blaupunkt San Marino 330. Among Blaupunkt's Symphony series of infotainment systems, San Marino 330 is quite popular. It comes with

Blaupunkt San Marino 330

a 15.8cm (6.2-inch) touchscreen having 800x480-pixel resolution. The system consists of a USB port, audio-video and auxiliary cables as well as a slot for microSD or microSDHC memory chips.

Bluetooth support enables hands-free operations. Its audio is channelled through four speakers, each with 45-watt output capacity. The unit comes with integrated FM/AM support and Travelstore. It costs ₹ 14,990 on www.blaupunkt.com/in

JVC KW-V11. JVC's KW-V11 is a 15.8cm (6.2-inch) multimedia receiver system that comes with a touch-enabled VGA display and a strong audio system with four 50-watt speakers.

JVC KW-V11

Sound quality is further enhanced by three pre-output terminals (front, rear and sub-woofer) and a five-band audio equaliser with 11 preset settings.

More suited for audio playback, this infotainment system comes with CD/DVD reader, USB input support and remote control for wireless usage. It also comes with steering wheel control and inbuilt AM/FM support. It is available for ₹ 9975 in online retail stores.

Car health and safety trackers

Pluggable smart gadgets can keep you constantly updated about the health of your vehicle. These gadgets provide information regarding engine status, fuel consumption and so on.

These provide notifications in case of possible breakdowns. Some devices auto-send distress signals to nearby emergency centres, too.

Rollr Mini and CarSense. Rollr Mini is developed by Rollr, a telematics subsidiary of Samvardhana Motherson Group, while CarSense is a product by Carnot Technologies. These are GPS-based plug-and-play devices that can be used for four major operations: monitoring vehicle health, tracking location in real time, analysing driver behaviour and sending vehicle security alerts. The devices can be plugged into the car's onboard diagnostics (OBD) port and set up with respective mobile apps.

In addition to real-time vehicle health alerts and

vehicle tracking, the devices also rate driving behaviours, along with other information such as harsh braking and over-speeding—all of these are visible on the app. These provide suggestions and trainings for improving driving skills, after evaluating the ratings received. These auto-send SOS alerts to saved contacts in case of an accident. Rollr Mini is priced at ₹ 6499, while CarSense at ₹ 6900. Both are available on their respective company websites and other online retail stores.

Raksha SafeDrive. SafeDrive, produced by Indian startup Elsys Intelligent Devices, is an OBD-compatible (or car lighter port compatible) smart device. It provides auto-access to nearest helplines and service centres in case of unforeseen breakdowns or accidents.

Raksha SafeDrive

Driven by GPS/cellular network, the device contains sensors that detect a breakdown or car crash, and automatically reach out to the nearest emergency point, sending out distress calls. Moreover, it allows one-touch access to the nearest mechanic station or medical assistance booth, even when stranded. The device provides two-way calling facility for clear audio interactions. SafeDrive is available for ₹ 9999.
