Tablet PC

Ideal for Aadhaar authentication

iBall has launched iBall Slide Imprint 4G, a tablet that comes with an integrated fingerprint sensor, which enables secured biometric authentication. Equipped with a unique fingerprint scanner, the tablet is STQC certified for Aadhaar verification. Not only does it serve the purpose of scanning and recording, but also verifying the identity of a person. Additionally, this device cannot be unlocked using the fingerprint scanner.

Imprint 4G has been engineered to simplify the ease of use and portability for various segments including banks and government offices. It runs on Android 7.0 Nougat and is powered by quad-core 1.3GHz ARM Cortex A53 64-bit processor and 1GB or 2GB

RAM. The tablet comes with 8GB or 16GB built-in memory, which is further expandable up to 32GB.

In terms of connectivity, the tablet supports dual-band Wi-Fi (802.11 a/b/g/n), 4G with VoLTE, multiple USB ports (one micro-USB port and one normal USB port), USB OTG, micro HDMI, cast screen, Bluetooth 4.0, USB tethering and more. It also comes with an optional LAN port.

Imprint 4G is supported by a massive 5000mAh battery. It is pre-loaded with multi-language keyboard containing 22 regional languages with read and write support. The dual SIM device comes with additional features like GPS, A-GPS, phone calling, light sensor and magnetic sensor, among others.

Smartband

For fitness enthusiasts

Lenovo has launched the latest variant in its fitness category—HX06 active smartband. It is a valuable aid in keeping users healthy in today's harried lifestyle. The IP67 water-resistant (up to 30 minutes) device sports a scratch-proof display. It features long sitting alerts, running mode, vibration reminders and pedometer, among others. Running mode helps users track their steps, distance covered while running/walking and calories burnt during that time. The smartband enables the growing fitness-conscious millennials to track their movements, and stay active and fit.
