

(a) DRM Chennai @ 729kHz

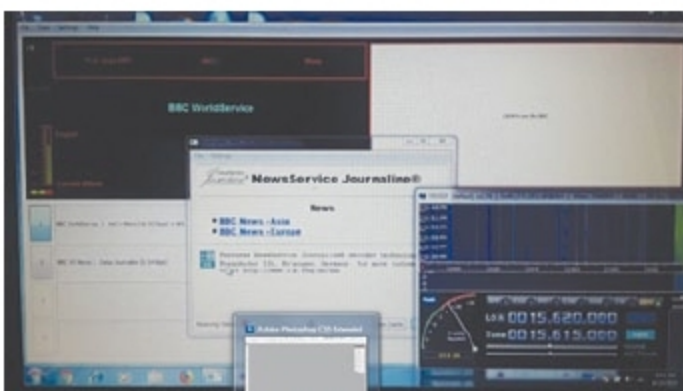

(b) DRM Tiruchirappalli (Trichy) @ 945kHz

(c) Vividh Bharti and Rainbow channels in DRM Chennai @ 783kHz

(d) Ragam and FM Gold channels in DRM Chennai @ 720kHz

(e) BBC World Service @ 15,620kHz received in Chennai

Fig. 5: Screenshots of DRM transmissions for different channels at different frequencies; taken using SDSsharp or HDSDR for demodulation from SDR module and Dream software for audio decoding (both software working simultaneously)

DRM transmissions are HDSDR, SDSsharp and Dream.

Configuring the SDR with suitable software for DRM reception can be tricky. Most manufacturers provide a quick start guide to help set up. For receiving a particular modulation (like AM, FM, DRM, SSB, USB or CW), a compatible program is run on the computer to control the receiver.

In SDR, some or all physical layers are software defined. The software determines the specifications of the radio. Any changes in the software changes the functions and performance of the radio. Selection of functions like modulation, demodulation, filtering and frequency can be done through software. Wireless system protocols are different for each country. However, SDR can be used anywhere in the world.

The authors received DRM transmissions from AIR - Chennai radio station at 720kHz every day from 15:30 to 16:30 (except Sunday), and at 729kHz and 783kHz as per regular schedule throughout the day.

DRM transmissions received by the authors in Chennai and videos of the reception are uploaded on YouTube. The links are given below.

Ragam and FM Gold channels are transmitted in 720kHz, while Vividh Bharti and Rainbow channels in 783kHz. At 729kHz, simulcast single channel (Ragam) is transmitted.

Apart from AIR's DRM transmissions in medium-wave frequencies, DRM transmissions by BBC World Service and Radio Kuwait channels in short-wave frequencies are also available to receive across India.

The complete list of DRM transmissions in medium wave across India, taken from AIR website, is given in Table II.

Note. Current test transmission of AIR in medium wave is scheduled up to October 27, 2018. **EFY**
