

Fig. 2: Actual-size PCB layout of pattern generator

Fig. 3: Components layout for the PCB

ard reset circuitry, 10-kilo-ohm resistor and 10µF capacitor to connect the reset pin.

Software

The software is written in C language. Compile the code using Keil software. Logic behind the software is described briefly for easy understanding and editing. (Topview programmer was used for programming the IC in EFY Lab.)

Construction and testing

An actual-size PCB layout for the pattern generator is shown in Fig. 2 and its components layout in Fig. 3. After assembling the circuit on the PCB, connect the 5V supply across CON1. Connect reset switch S1 and all LEDs on the front panel.

The circuit can be tested on the assembled PCB or breadboard. Give 5V supply voltage to the MCU.

This circuit was tested on babies in the age group ranging from two months to two years. They found the LED light patterns quite interesting and fascinating.

Modification of light patterns can be done in the software to generate various design patterns. **EFY**

Navpreet Singh Tung is assistant professor in department of electrical engineering, Bhutta Group of Colleges, Punjab

SO YOU FEEL YOU MANAGE 'IT' SMARTLY?

What if we say that we can get top IT industry executives to queue up to **meet you**.

Here's that once in a lifetime opportunity to get you and **your skills** seen by the whole Indian open source industry.

HOW?

BE A SPEAKER. OUR SPEAKER. SHARE YOUR EXPERIENCE AT SMART IT INDIA

smartIT INDIA

11-12 OCTOBER 2018

NIMHANS Convention Center, Bengaluru

Here's what you can talk about:

- Best practices & techniques in managing IT Infra smartly
- Latest tools & technologies that promise to make managing IT simpler
- How to get the best out of Open Source stack for managing IT infra?
- Hyper-converged: to do or not to do?
- What're the best practices & techniques to influence the non-technical decision makers?
