- Ashwin Agarwal, President - strategy and operations, Phi Education Solutions
- Dilip Jain, CEO, Rajguru Electronics
- Jayesh Jain, director, Macfos Pvt Ltd
- Parimal Wagh, senior administration officer, C-DAC Pune
- Dr Pravin Raut, founder and MD, SINCOM Sindhu Electronics and Communications Pvt Ltd
- Ravi Velnati, CEO, Anshuman Tech Pvt Ltd
- Sagar Gala, director, Gala Electronics

3D printers are important for certain training setups

the motto to provide hands-on electronic systems to students. We are ready to upgrade ourselves according to various technological changes and make our products suitable for the new curricula, if given the chance.”

Business opportunities

As demand increases and horizons of technology expand, newer opportunities for innovation and business will grow in the training kits space. However, the market already has strong competition. Jain says, “Due to increase in supplies, revenue margins are falling. On the other

hand, due to increase in demand, everyone is able to get a share of the market.”

Agarwal confirms, “Yes, there is space for newcomers, but only for those with new and innovative products. These is no space for mere importers or distributors.”

According to educational data, the number of students preferring electronics engineering nowadays is decreasing, which may affect future demand.

For a new player to survive, products must align with the latest technologies and industry requirements. Experts suggest that these products must meet international standards at competitive prices.

So how can one identify where to innovate in this zone? Dr Raut says, “The area of electronics and allied subjects is very vast. Everyone cannot reach all corners. There are good business opportunities in modern technical fields. Thanks to the Internet, now businesses are global. The market is now open for online and offline business models.”

Market options: where to go

The market today is driven by many reliable dealers of training kits and products, including manufacturers, suppliers and distributors. Jain gives a macroscopic view on industry players, both local and global. He says, “There are many new companies that are specifically making and dealing in modern educational kits, like Thinnkware and Avishkaar Box, among others. Then, there are big international players including Lego Mindstrom, Makeblock, DF Robotics and Vex robotics.”

Rajguru Electronics supplies electronics components and modules for training kits. The company plans to start its own manufacturing facility in India by 2019.

Robu.in caters to the Indian DIY and makers community, colleges, research labs and electronic enthusiasts, providing components for the IoT, wireless, sensors, batteries and motors, and training solutions for projects like robotics, drones and electric vehicles.

Phi Education Solutions provides Made in India training kits and caters to educational institutions and colleges to educate the students on practical Industry 4.0 concepts.

Gala Electronics is a robotics kit solution company, providing project kits that are made in India.

Anshuman Tech Pvt Ltd supplies hardware and software training platforms across India, supported by nationally spread distribution channels.

SINCOM Sindhu Electronics manufactures, supplies and exports hardware-based electronics educational trainer kits.

Kits'n'Spares is an online provider of a variety of training products including DIY kits (RFID, GSM, VLSI and more for beginners and engineers), development boards (ARM, Microchip, Renesas and Wi-Fi-based boards), components, equipment and e-books.

There are many more players whose solutions and services can be explored. All of these together have created a holistic and filled ecosystem with a variety of options and availability. **EFY**
