

optimised for factory-fitted in-car DVR cameras. AR0237AT is a cost-optimised, automotive-qualified sensor that offers Full HD video capture at 1080p/60fps, as well as still image capture. The low-light performance of AR0237AT further improves when it is coupled to a Clarity+ enabled DVR processor.

Switcher ICs

Power Integrations has released InnoSwitch3-Pro family of configurable off-line CV/CC and CP flyback switcher ICs.

Capable of delivering up to 65W and achieving up to 94 per cent efficiency across line and load conditions, the ICs permit precise, dynamically adjustable control of voltage (10mV step) and current (50mA step), via a simple two-wire I2C interface. Devices may be paired with a microcontroller or take inputs from the system CPU to control and monitor the off-line power supply.

TOOLS & EQUIPMENT

Isolated gate driver board

Analog Devices, Inc. in collaboration with Microsemi has introduced a high-power evaluation board for half-bridge SiC power modules with up to 1200V and

50A at 200kHz switching frequency. The isolated board improves design reliability while also reducing the need to create additional prototypes—saving time, lowering costs, and decreasing time to market for power conversion and energy storage customers.

Wireless development kit

Under the name 760308EMP-WPT-200W, WürthElektronikEiSos and Infineon Technologies AG are offering a 200-watt development system for wireless power transfer. What makes this development kit special is that the link between the transmitter and receiver coils can be used to transfer not only power but also data. The 760308EMP-WPT-200W development kit comprises a power supply, a transmitter unit and a receiver unit, and uses products from WürthElektronik and Infineon (MOSFETS, drivers, microcontrollers and voltage regulators).

IoT development board

Startoon Labs has launched Slabs-32 board that allows quick prototyping of Internet of Things (IoT) based embedded systems.

Applications include STEM based educational tools, robot controllers, data acquisition and logging using SD card, onboard data visualisation, and wireless data transmission to the server for further analysis. Industries can use Slabs-32 board for remote monitoring and control of their machines.

The platform operates off +5V power supply and has a 3.3V LDO for all onboard electronics. It includes an 8-bit controller, a 32-bit controller (WiFi SoC), 12 GPIOs, five analogue inputs, two UART ports for serial communication, one SPI and one I2C port for interfacing external sensors, actuators and other peripherals.

Test port adaptors

Rosenberger has revised and expanded its product range of high-quality, ruggedised test port adaptors for vector network analyser (VNA) test applications. The product range

covers RPC-3.50, RPC-2.92, RPC-2.40 and RPC-1.85 in-series and inter-series test port adaptors for frequencies up to 70GHz. Their ruggedised construction minimises mechanical abrasion and ensures reliable protection.

MISCELLANEOUS

Smart LED lights

Svarochi has introduced smart LED lights that can be wirelessly operated with a mobile app. Consumers can switch the lights on and off, set these to the colour temperature of their choice (get the correct shade of white or yellow), adjust intensity and set any colour (from among 16 million available). The setup and operations are simple—consumers need to only know how to operate a smartphone.

Svarochi smart lights are available under three categories: lamps, downlights and spotlights. These are controllable with an app that will be available on Android and iOS.

Software

MathWorks has introduced Release 2018a (R2018a) with a range of new capabilities in MATLAB and Simulink. R2018a includes two new products, predictive maintenance toolbox for designing and testing condition monitoring and predictive maintenance algorithms, and vehicle dynamics blockset for modeling and simulating vehicle dynamics in a virtual 3D environment. It also includes updates and bug fixes to 94 other products.
