

ASSISTIVE TECHNOLOGY MAKING LIFE EASIER

Deepshikha Shukla

Technology today may not be able to help the blind see or the speech-impaired speak but it can surely convey their message and provide help when needed. Many companies around the world are developing products and technologies to help persons with disabilities to complete everyday tasks. A few of them are listed below.

For visual impairments

Lechal footwear. These Bluetooth-enabled shoes give gentle vibrations at the feet, guiding the wearer invisibly but intuitively. They give detailed route guidance at every turn and even work offline, which means the wearer can wander off with no Internet or data connectivity.

Lechal is simple to use. Just connect pods to the Lechal app, set a destination and let the footwear guide the way. Users can tag locations, set destinations and get real-time data on landmarks all around. They can also share their location with other users. Lechal shoes have a very good battery backup of up to 15 days on a single charge. These can be purchased from Amazon.

Lechal shoes

Eone Bradley watch. This innovative wristwatch tells time not just by sight but touch also. It features raised markers and two ball bearings that travel around the watch face in

separate tracks: one for minutes and the other for hours. The watch can be bought online from Amazon.

Dot smartwatch. This watch lets the users get notifications and messag-
