

es, listen to music, easily locate their phone, check calls and set alarms. Its battery lasts up to one week on a single charge. The watch has a large circular face with a moving keyboard that relays braille text in real time through textural dots.

Connect the watch to a smartphone application called the Dot Watch app to receive information such as road navigation, weather notifications, calls and text messages, as well as social media alerts. Users can flip between messages by tapping the face of the watch or manually by using the slide buttons and dial.

The watch can be personalised with straps of different colours and materials.

Braille ebook reader Bittab. It is a multi-line braille reading and writing device that delivers real-time content to the visually impaired via touch navigation. It displays one whole page of braille text at once.

Be My Eyes app. In times of need, the visually impaired can seek sighted volunteers' help by connecting with them on a video call over the Be My Eyes app. Through the direct video call, they can seek help to check expiry dates, distinguish colours, read instructions or navigate new surroundings. The app can be installed from Google Play Store.

For hearing impairments

UNI. This two-way communication tool for the deaf detects finger and hand gestures with its specialised camera algorithm, then converts these into text in a very short time to provide

the meaning of sign language. It also enables users to create their own sign language with its sign builder, so it is easy to add custom language to the dictionaries. It is a subscription-based app with two versions: one requires a data connection and the other doesn't.

For other disabilities

Foot mouse. It doesn't require use of hands but works like a hand-operated mouse with features like left/right click, up/down and adjustable mouse cursor. It's easy to use and supports Bluetooth. The mouse is available for PCs, Macs and tablets. It can be purchased from Amazon.

Tobii Dynavox i-12+. Speech generation devices combined with eye tracking and eye control features enable various communication opportunities for individuals with special needs. The camera tracks users' eye movements, allowing them to use the device simply by blinking or gazing.

Tobii Dynavox i-12+

Tobii Dynavox i-12+, part of the I-Series+ devices, is capable of speech generation and can be controlled via touch, switches or gaze interaction via an optical built-in eye tracker. It allows a more independent and integrated life for people suffering from stroke/aphasia, cerebral palsy, Rett syndrome or ALS. Different software on it let users
