The Vu Official Android TV is a 4K smart TV that operates on Google's latest operating system Android 7.0 Nougat. It lets users access the Google Play Store, YouTube, Google Games and the complete Google ecosystem. Vu has also partnered with leading video-on-demand service providers like Netflix, Hotstar and ALTBalaji, thus providing users with authorised access to unlimited, diverse and latest content.

A distinct feature of the TV is its ActiVoice feature. The easy-to-use ActiVoice remote helps users to seamlessly search, browse and select in 88 languages. The ActiVoice Search intelligence enables search within apps and recommend results according to users' preference. Integrated with Chromecast, the Vu Official supports mobile and desktop casting.

Robotic Vacuum Cleaner

Picks up dirt, dust and large debris

Roomba 606 robotic vacuum cleaner from iRobot does the job on its own automatically, unmonitored. Low-profile, disk-shaped design enables it to reach under most furniture and other hard-to-reach areas. Just press its Clean button, and Roomba 606 starts vacuuming without the need for any programming.

The bot comes with two multi-surface brushes and an edge-sweeping brush. Using Dirt Detect technology, it recognises and focuses on high-traffic areas where dirt collects. Advanced sensors help it to intelligently navigate your home. iAdapt Navigation technology helps the bot to make more than 60 decisions/second to adapt to your home interiors, and thoroughly clean your floors and carpets. Inbuilt cliff detection sensors prevent the robot from falling downstairs and other drop-offs. It can automatically return to its home base charging station, to recharge either at the end of cleaning run or when it's low on battery.
