

GADGETS TO TRACK YOUR HEALTH

Deepshikha Shukla

A list of gadgets that work together with your smartphone to help you stay fit and avoid costly visits to doctors for checkup and treatment

Sedentary life-style together with environmental pollution increases the risk for many health problems including heart disease, asthma, obesity, headaches, diabetes, anxiety and gastrointestinal problems. Technology can help you to keep fit by monitoring your health and also suggesting the best possible ways to cure. A few such fitness monitoring gadgets are listed here.

CUE

It can identify the level of inflammation, testosterone, vitamin D and fertility with a small amount of blood or saliva. It also lets you check test results over your mobile phone.
