es styling rules and assigns popularity to individual items and completed looks

3. Fashion trend tracking—a learning component that reads users' feedback and adjusts weight in the style engine based on the popularity rank of a completed look and user opinions on styling looks

Computer vision techniques can extract attribute information from an image and AI techniques such as semantic mapping enable the program to deal with tricky attributes such as fabric. AI programs have the ability to execute a fashion styling task with a simplified model.

AI-based stylist program

Conceptually, fashion can be defined as a two-dimensional concept, an object and a process. The fashion object can be thought of as a specific

product or innovative design. In 2000, fashion design assistant system used genetic algorithms. Later, decision trees with genetic algorithms came into use to model individuals' clothing. In 2008, stylists started implementing category learning and neural networks in an intelligent shopping assistant system and computer vision techniques with support vector machine classifiers to discover the semantic correlations between attributes.

In the past, studies have been conducted to understand, detect and predict fashion trends and fashion cycles from the perspectives of both the theory and the application. These studies generally focused on predicting trends in colour fashion of clothing. Later, an expert system was developed to assist stylists with information on new colour trends. AI models were also used to predict fashion colour trends with the help of an expert system.

AI programs are becoming an efficient assistant for human stylists. Earlier, stylists used colour harmony evaluation between garment pieces to consider the four basic attributes—colour, outline, print and fabric. An AI-based program is capable of handling more attributes such as event, clothes, shoes, accessories, makeup and hair-styling. Complete fashion design usually includes details such as a top with a bottom or dress, shoes, accessories, bags, hairstyles and makeup.

SINCE 1962

POCKET SIZE DIGITAL MULTIMETERS

108B+ TRMS

101B+

Pocket Size

- 3½ Digits 4000 Counts (101B+)
- 3½ Digits 6000 Counts (108B+ TRMS)
- Auto Ranging
- TRMS Measurement (108B+ TRMS)
- LCD with Backlight
- Upto 1000V DC
- Upto 750V AC
- Upto 10A DC / AC
- Upto 40MΩ (101B+)
- Upto 60MΩ (108B+ TRMS)
- 4.000nF ~ 4.000mF (101B+)
- 9.999nF ~ 9.999mF (108B+ TRMS)
- 99.99Hz ~ 20.00MHz
- 0.1% ~ 99.9% Duty Cycle
- RELΔ (101B+)
- -20°C ~ 1000°C (-4°F ~ 1832°F) (108B+ TRMS)
- K Type Thermocouple (Upto 260°C) (108B+ TRMS)
- Diode Test, Audible Continuity, Data Hold, Auto Power Off, & Low Battery Indicator

Meco Meters Private Limited

Plot No. EL-60, MIDC Electronic Zone,
TTC Industrial Area, Malhase,
Navi Mumbai - 400710 (INDIA)
