

Do you have the right gateway to tie your Industrial Internet of Things systems together?

NebuLink Industrial Gateway is powered by Arha framework of Nebulae Gateway families. It is a modular software framework developed using OSGi standards. It is a heart of NebuLink Industrial Gateway, but due to its hardware agnostic nature it can power any hardware having compliant settings to Arha framework requirement.

FEATURES OF Industrial Gateway

- Support wide range of Industrial protocols to serve requirement of Industry 4.0
- Modularity and Dynamic software framework with rich resource management
- Developer friendly SDKs to implement application specific services.
- Remotely Start, Stop, Install and Remove any of the application service
- Standalone industrial and home automation gateway capability based on application requirement
- Advanced router of network devices connected with different wired or wireless protocols
- Wide range of communication protocols WiFi, BLE, GSM(2G, 3G), Ethernet, PowerLine, 802.15.4, ZigBee, Modbus
- Highly Secured Network connection from Cloud to Connected Devices
- Easy adaption compatibility for third party cloud, and capability to connect with multiple clouds concurrently
- Advanced Peripheral access to monitor, control and configuration from remote endpoint
- Supports Industrial Application protocol with modular integration like Modbus, CAN, RS485, RS232
- Supports various interface options for Sensors like SPI, I2C, UART
- Hardware agnostic and flexible NebuLink Gateway framework
- Scrupulous Remote Firmware update of NebuLink Gateway and NebuLink Nodes with schedule update and instant feature as well
