ESSCI plans 50 new Centres of Excellence

Electronics Sector Skills Council of India (ESSCI), formed under the ministry of Skill Development and Entrepreneurship, has trained over 700,000 candidates in over 60 electronics system design and manufacturing job roles across the country in the last five years. By end of 2020, it plans to open 50 new Centres of Excellence (CoE) to train more industry-oriented professionals.

Wipro launches additive manufacturing solution centre

Wipro3D, the additive manufacturing business unit of Wipro Infrastructure Engineering, has launched a state-of-the-art solution and experience centre for metal 3D printing in Bengaluru. The facility was inaugurated by Wipro chairman Azim Premji. The 1115sq.m (12,000sq.ft) solution centre has all capabilities including leading-edge build technology, post-processing, research, characterisation and validation facilities.

Analog Devices acquires Symeo GmbH

Analog Devices, Inc. has acquired Symeo GmbH, a privately held company based in Munich, Germany that specialises in radar hardware and software for emerging autonomous automotive and industrial applications. Symeo's innovative signal processing algorithms will enable ADI to offer customers a radar platform with significant improvements in angular accuracy and resolution.

Panasonic introduces new energy storage solutions

Revamping its energy storage solutions within the telecom tower segment, Panasonic India has introduced a state-of-the-art compact business power solution, the CBPS 8000. This solution essentially houses all the imperative functional tools in a single box, managing power requirements at the site comprehensively. Its plug-and-play system addresses challenges faced by more than half a

Atos launches multifunction satellite power testing system

Atos has launched ProUST univerSAS—a light-weight, compact satellite power testing system that improves high-volume satellite production by increasing the speed and efficiency of testing, whilst maintaining the industry's quality and safety standards. ProUST univerSAS is the first product following Atos' recent acquisition of Siemens Convergence Creators.

Xilinx unveils adaptable computing product category

Adaptive and intelligent computing solutions provider Xilinx has announced a new product category called adaptive compute acceleration platform (ACAP) that goes far beyond the capabilities of FPGAs. ACAP is a highly integrated multi-core heterogeneous compute platform that can be changed at the hardware level to adapt to the needs of a wide range of applications and workloads. It is ideally suited for big data and artificial intelligence applications.

Keysight solution for asset utilisation and health monitoring

Keysight Technologies, Inc. has announced Test Asset Optimization Services—which it claims to be the industry's first integrated solution to measure asset utilisation and health in real time. These services eliminate the need for companies to assign personnel to manually record when instruments are in use and making measurements. Thus customers can dramatically improve return on investments by optimising capital and operating expenses to meet test demands in research and development through manufacturing.

million telecom towers located across geographies.

The company has further expanded solution offerings to new industries such as data centres and commercial, industrial sector and rural microgrids.

Energy Sistem enters India

Energy Sistem, a Spanish technology giant with over two decades of experience in creating personal audio devices, has entered the Indian market in partnership with Alchemie Commerce. The company is present in over 40 countries globally with music tower systems, music boxes, headphones, speakers, home theatres, portable audio devices and other product categories.

Speaking at the launch, Natalia Ovsyannikova, country manager, Energy Sistem, commented, "While the industry is estimated to be worth ₹ 30 billion, we expect to reach ₹ 2.5-billion revenue by 2020."

Energy Sistem's product range will be available across all the major retail outlets in India across 20 cities along with other e-commerce platforms.

Microsoft announces renewable energy deal in India

Microsoft Corp. has completed its first renewable energy deal within the Karnataka state of India. The agreement will see Microsoft purchase 3 megawatts of solar-powered electricity from Atria Power to help power its new office building in Bengaluru. This will meet 80 per cent of the projected

electricity needs at the new facility.

This deal is part of the state government's programme to encourage investments in local solar energy operations, in line with the larger Indian government goal to ramp up solar power generation to 100 gigawatts by 2022, as part of India's efforts to mitigate the effects of climate change.
