The Indian electronics manufacturing equipment industry is bound to evolve with the quickly changing electronics manufacturing landscape of the country

The role of manufacturing equipment is crucial to ensure the quality and functionalities of any electronic device or component. The entire processing life cycle of an electronic device travels through various manufacturing equipment, from being a printed circuit board (PCB) to a finished electronic device.

According to changing application requirements, electronic devices and PCBs also need to be developed in various shapes, forms and sizes. The ever-increasing complexity of electronic assembly and miniaturisation of components enhance the demand for advanced manufacturing equipment.

As PCBs and electronic components become more miniaturised than before, manufacturers face the challenge of placing accurate deposits of small components on miniaturised boards. This, in turn, fuels the demand for advanced manufacturing equipment with a high degree of reliability and accuracy.

Technological advancements—which are necessary to meet high-performance expectations in electronics—combined with today's

Methodology

The methodology adopted to collate quantitative and qualitative information about SMT equipment market began with secondary research. Findings were then analysed and verified through primary research by collecting inputs from industry experts. This report covers the following topics:

1. Market size
2. Market opportunities
3. Market drivers
4. Market trends
5. Types of equipment in demand
6. Market challenges

A trend analysis was done based on their inputs.

high-speed production, complete process automation and stringent quality assurance standards will drive the demand for manufacturing equipment.

This study presents the current trends and growth opportunities in the Indian electronics manufacturing equipment industry with special focus on surface-mount technology (SMT).

Market opportunities

According to a research report published by MarketsandMarkets, the SMT market is expected to reach a turnover of US\$ 5.42 billion by 2022, growing at a CAGR of 8.9 per cent between 2017 and 2022. The market's growth will be primarily driven by higher demand for miniaturised consumer electronic products and enhanced adoption of electric vehicles (EVs) with advanced features for connectivity, entertainment and safety.

The Indian electronics manufacturing equipment market is also bound to grow along with the electronics manufacturing sector in the country. The Indian electronics manufacturing industry is on track towards achieving its full
