BLDC motor driver ICs

Power Integrations has unveiled Bridge-Switch integrated half-bridge motor driver integrated circuits (IC) family. The ICs feature high- and low-side advanced fast recovery diode field effect transistors with integrated loss-less current sensing, resulting in inverter conversion efficiency of up to 98.5 per cent in brushless DC (BLDC) motor drive applications to 300W.

Superior efficiency and distributed thermal footprint provided by the driver eliminates the need for a heat-sink, reducing both system cost and weight.

Gate-driver ICs

Infineon Technologies has introduced a new family of 2-channel isolated EiceDRIVER ICs for use in high-performance, power-conversion applications. The new gate-driver IC family is ideally suited for high-voltage PFC and DC-DC stages as well as for synchronous rectification stages in server, telco and industrial switching mode power supplies (SMPSes). Further applications are 48V to 12V DC-DC converters, battery and electrical vehicle charging stations as well as smart grid and solar micro-inverters.

Isolated CAN FD transceivers

Analog Devices has announced an extension to its transceiver product line for controller area networks with

flexible data-rate (CAN FD). The galvanically-isolated iCoupler digital isolation ADM3055E IC series offers 12Mbps performance to support future needs, yet remains fully backward-compatible with existing CAN and CAN FD designs. It features a low-radiated emissions isoPower isolated DC/DC converter as well as enhanced robustness, resulting in easier designing and faster time-to-market for CAN nodes with full-safety isolation.

SiC power module

ROHM has announced a 1700V/250A-rated SiC power module that provides a high level of reliability optimised for inverter and converter applications, such as outdoor power generation systems and industrial high power supplies. BSM250D17P2E004 utilises new construction methods and coating materials to prevent dielectric breakdown and to suppress increases in leakage current.

As a result, high reliability is achieved that prevents dielectric breakdown even after 1000 hours under high temperature, high humidity bias testing (HV-H3TRB). This ensures high-voltage (1700V) operations even under severe temperature and humidity environments.

DC/DC converters

The latest addition to RECOM's railway portfolio are two 40W and 60W DC/DC converter series in quarter-brick packages. These have an ultra-wide input

voltage range from 14V DC to 160V DC, making these a universal solution for

railway rolling stock applications and high-voltage battery systems.

The 12:1 input voltage range of RP40Q-RUW and RP60Q-RUW series covers all input voltages from nominal 24V DC up to 110V DC in a single product. The converters offer basic isolation with regulated 5V, 12V, 15V, 24V or 48VDC outputs, including sense and trim pins. These have consistently high efficiency over the entire input voltage range and an operating temperature range from -40°C up to +85°C (+68°C for the RP60Q-RUW) at full load without forced air cooling.

NFC dynamic tag ICs

ST25DV-PWM NFC dynamic tags from STMicroelectronics introduce an innovative contact-less way to program presets for products on the production line or in-situ, and simplify setup or fine-tuning at point of use. The ICs target all applications featuring pulse-width modulation (PWM)-based controllers, such as lighting products, motorised appliances, fans and thermostats, using an ISO15693 RFID reader, NFC-enabled smartphone or other mobile device.

mmWave sensors

To advance millimetre-wave (mmWave) sensor technology in worldwide industrial applications, Texas Instruments has announced its 60GHz sensor portfolio for industrial systems. IWR6x mmWave sensors enable industrial automation through on-chip processing capabilities, providing real-time decision-making and signal processing.

The sensors are the first to include antenna-on-package offerings, which remove traditional challenges associated with RF design while shrinking size up to 75 per cent and reducing overall cost.
