

Analogue ICs

Designers striving for greater efficiency and performance from increasingly compact electronic systems can now tap into three new building-block analogue ICs from Maxim Integrated Products. MAX41464 sub-1GHz wireless transmitter, MAX38888 backup power regulator and MAX16141 36-volt ORing FET controller for building automation, industrial, automotive and portable applications demonstrate leading advances in efficiency, size and versatility for next-generation electronic systems.

TVS diodes

Littelfuse has expanded its TPSMB series of automotive transient voltage suppression (TVS) diodes that protect sensitive automotive circuitry from a higher level of voltage transients induced by lightning and other events. These diodes expand the series' breakdown voltage range from 7.5V to 550V for uni-directional and 10V to 650V for bi-directional devices.

The AEC-Q101 qualified TVS diodes provide 600W of peak pulse power dissipation in a standard DO-214AA SMB package.

TEST & MEASUREMENT

Transceiver

National Instruments has announced FPGA-enabled PXIe-5785 FlexRIO transceiver, which aims to shorten the design cycle for advanced radar applications in aerospace and defence. The transceiver can sample directly at RF, which simplifies and lowers the cost of high-channel-count systems. This is important for building systems where

beams are formed using hundreds or even thousands of antenna elements.

Digital lux meter

Metrix + digital lux meter LX 1336A features a wide measuring range and high resolution. It has a separate light sensor for measuring light intensity or luminosity at different optimum positions in both lux and foot-candle (FC) parameters.

Basic features of low battery indication, auto zero adjustment and digital display give exact readings with no error. Max value hold function enables the user to get maximum value while measuring over a period.

Mixed-signal oscilloscope

MSO 5000 from Rigol has seven instruments integrated in a small package: 2/4 channel digital oscilloscope, 16-channel logic analyser, spectrum analyser, 2-channel 25MHz arbitrary waveform generator, digital voltmeter, frequency counter and totaliser, and protocol analyser. It comes in two models: 70MHz/100MHz/200MHz and 350MHz with a large touchscreen display.

Digital clampmeter

MECO has introduced a TRMS digital clampmeter (model: 36 - AUTO BL). It is a 3-digit, 6000-count, current range up to 600A AC (TRMS and DC), auto-ranging digital clampmeter with LCD backlight. It has a voltage range up to 600V AC (TRMS and DC) and a jaw opening size of 25mm.

Basic accuracy for DC voltage is $\pm 3\% \text{rdg} + 3 \text{dgt}$, for AC voltage is $\pm 1.2\% \text{rdg} + 3 \text{dgt}$, for DC current is

$\pm 3\% \text{rdg} + 3 \text{dgt}$ and for AC current $\pm 2.5\% \text{rdg} + 8 \text{dgt}$.

AC voltage detector

Extech 40130 can detect the presence of live wires before testing. This pocket-size AC voltage detector features a low-profile tip that can be inserted into outlet receptacles or used to trace along wire insulation to locate breaks. The detector measures from 100V AC to 600V AC (50/60Hz) with visual (flashing red LED) alarms and audible (beeping) tones that can be switched off. The device is CE-approved and UL-listed.

Copper clad tester

Dolphin Electronics' copper clad tester is a handy tool to check the thickness of the copper layer of copper clad in microns. It checks the commonly-available copper clad in 17/35/70/105 microns.

The instrument operates on 9V DC battery. Mechanical dimensions of the unit are 120mm x 70mm x 40mm, having sensing face of 30mm diameter.

INTERNET OF THINGS

Design tool

Digi-Key Electronics has introduced a new design tool called DK IoT Studio. It is an integrated development environment that provides a simple way to create Internet of Things (IoT) solutions.

The tool, developed in partnership with Atmosphere IoT, has an intuitive user interface along with drag-and-drop functionality. Simply dragging sensors, processors and other library elements, and dropping these onto the design panel allows users to make connections and start collecting data and sending it to a mobile device or the cloud.
