Huawei introduces EMUI 9.0 in India

Huawei Consumer Business Group, India, has announced EMUI 9.0 operating system (OS) for the Indian market. The upcoming OS on Huawei devices features an intuitive interface, rich features and several new capabilities. Huawei's take on Android P OS, EMUI 9.0 comes with system speed enhancements and greater artificial intelligence (AI) capabilities, among others.

Money management app Slonkit for young adults

Slonkit is India's first money management app that is linked to a physical VISA card. Powered by VISA and DCB Bank, it enables parents of children aged 10 to 18 to manage their pocket money through the app and card. Parents can create a Slonkit card and give monthly allowances to their kid(s). They can also add money to Slonkit card instantly, set budgets and alerts, track expenses and create spending limits.

Purelogic Labs launches air monitoring initiative

Purelogic Labs, an initiative to increase awareness about air pollution, has launched a comprehensive pollution monitoring platform, AQI India. The platform detects and reports invisible air particulate matter as small as PM2.5 along with noise pollution around the surrounding environment in places where monitoring sensors are installed. The company has installed 300 outdoor sensors including some live ones across the country. In association with Council of Energy, Environment and Water (CEEW), 50 monitoring sensors

have also been deployed in various districts of Punjab to keep an eye on crop burning.

Mobile health app launched by Indian Air Force

The Indian Air Force (IAF) has launched an innovative mobile health app named MedWatch in line with Prime Minister's Digital India, Ayushman Bharat and Mission Indradhanush initiatives. The app has been conceived by the doctors of IAF and developed inhouse by Directorate of Information Technology (DIT) with zero financial outlay. MedWatch will provide correct scientific and authentic health information to air warriors and all citizens of India. It comprises a host of features like information on basic first aid, health and nutrition, reminders for timely medical review and vaccination, and utility tools like health record card, BMI calculator, helpline numbers and Web links.

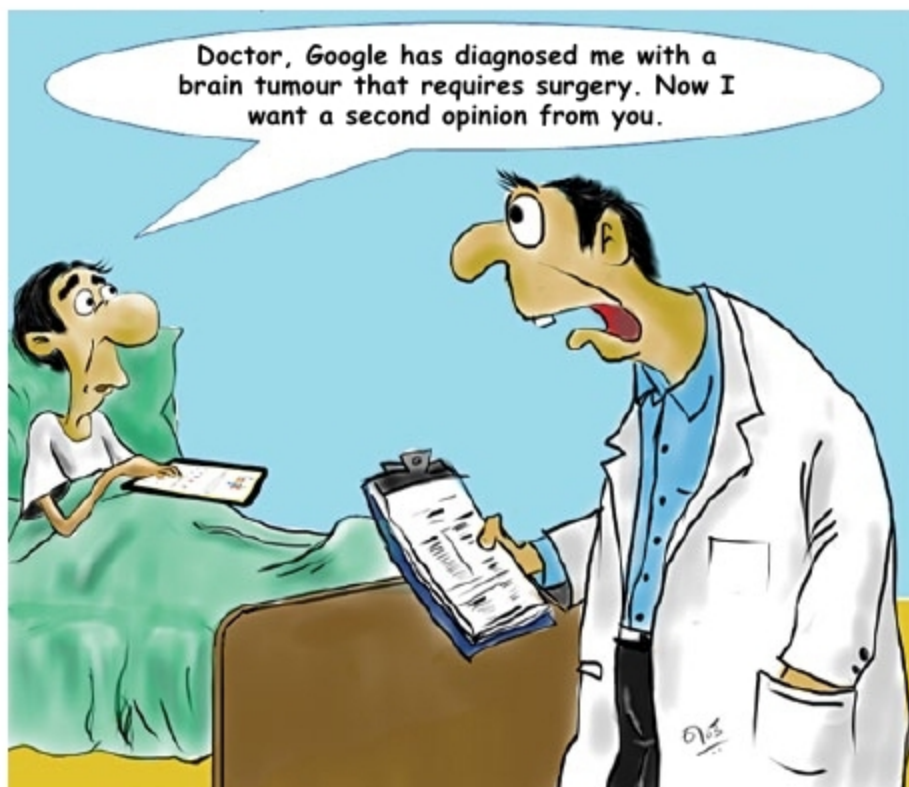

A virtual reality Web browser from Mozilla

Firefox Reality Browser is a virtual reality (VR) Web browser from Mozilla, which works with VR headsets for browsing the Web without a phone. It comes with both 2D and 3D immersive modes. Additionally, the browser supports VR Web content when available. So far, the app works with Viveport, Oculus and Google Daydream devices.

Bouncer to get more control over app permissions

Bouncer app gives users the ability to grant permissions temporarily. As soon as they exit the app, Bouncer automatically removes the permission, so that users do not have to worry about apps invading their privacy and wasting phone battery. Bouncer uses an accessibility service. It activates when a permission is granted and also gives the option to revoke it.
