

Entry-level, ultra-low-power STM32 MCUs

Simple, cost-efficient solution

New STM32L0x0 Value Line microcontrollers (MCUs) from STMicroelectronics present an additional, low-cost entry point to the STM32L0* series, delivering ultra-low-power technology and efficient 32-bit performance with the Arm® Cortex®-M0+ core for designers facing tight cost, size, or power constraints. In addition to price-sensitive and space-constrained consumer devices such as fitness trackers, computer or gaming accessories, and remotes, the new STM32L0x0 Value Line MCUs are ideal for personal medical devices, industrial sensors, and IoT devices such as building controls, weather stations, smart locks, smoke detectors, or fire alarms.

STM32LO Value Line MCUs

affordable ultra-low-power

- From 20 to 64-pin
- No compromise on low power
- User-friendly ecosystem

KEY FEATURES

- 128Kbyte Flash memory
- 20KByte SRAM,
- 512Byte true embedded EEPROM
- Low-power UART
- Low-power timer
- 41µA 10ksample/s ADC
- Nucleo-64 development board
- Hardware Abstraction Layer (HAL) library
