INDIAN SCIENTIST SERIES

I remember many of my articles being published in EFY when I was young. Now I am retired, and would like to contribute a series of articles on the future of the Internet.

Another important point is that, India is missing the development of science and technology. We are giving a lot of importance to expertise or PhDs. In the process, thinkers and imaginers are on the decline. We need to encourage our youth/students to be thinkers and imaginative. To encourage them, I would propose a series of articles on Indian scientists like J.C. Bose, S.N. Bose, C.V. Raman, M.N. Saha, Viswareya and so on.

Professor C.T. Bhunia

Through email

EFY. Thanks for associating with EFY again! We are glad to hear that you would like to contribute a series of articles on the future of the Internet and Indian scientists. We are sure EFY readers will appreciate the series.

SCROLLING DISPLAY

I have been a fan of EFY since 1997. EFY is my technological inspiration. Please publish an Arduino Uno-based 16 (columns) x 32 (rows) LED scrolling display. The text should be fed through USB keyboard in English letters as well as Bengali and Hindi.

Mriganka Chatterjee

Through email

EFY. Thanks for the feedback! We will try to publish the mentioned project as soon as possible.

TEMPERATURE ON SMARTPHONE

This is regarding 'Temperature Monitoring on Smartphone' DIY article published in July issue. I got the result on the serial monitor/plotter of Arduino IDE, and Tx LED on Arduino Uno board is blinking. But status LED in HC-05 is

Electronics Projects

Thank you for publishing 'Signal Generator and Inverter Using NE555 Timers' DIY project on your website, <https://electronicsforu.com>!

Toufan

EFY. Thanks for the feedback!

In 'Skin Resistance Meter' DIY article published on <https://electronicsforu.com>, can I use a breadboard instead of PCB?

Sneha

EFY. Yes, for testing you can assemble the circuit on a breadboard!

Please provide the PCB layout file in Gerber format for 'Design Your Own Li-Fi Dongle And Speaker' circuit available on <https://electronicsforu.com>

Rosario

EFY. Please contact support@efy.in for the PCB layout in Gerber format.

Thanks for publishing 'Two-Channel Wireless Audio Amplifier Using Bluetooth and TA8210AH' DIY article on <https://electronicsforu.com>!

Asma

EFY. Thanks for the feedback!

In 'PIN Diode-Based Fire Sensor' DIY circuit published on <https://electronicsforu.com>, LED3 is glowing and the buzzer continuously beeping.

Surya

EFY. Please check if transistor BC547 (T2) is faulty or connected in the wrong position.

Do you have a high-resolution schematic diagram for 'Arduino-Controlled 12V Battery Charger' article published on <https://electronicsforu.com>?

Ret

EFY. Please write to us on support@efy.in for a high-resolution image of this circuit, or any other help.

off. When I use an external 9V power supply, Tx LED as well as status LED are off. Smartphone app (MIT) is showing 'Not Connected' message. Please help.

Through email

The author Shibendu Mahata replies:
Please follow the steps given below for troubleshooting.

1. Disconnect Bluetooth module from Arduino board and try to connect it with your smartphone. Then check whether it is working.

2. Do not use serial plotter and Bluetooth module at the same time.

3. While using 9V power supply/battery, please use 5V output of Arduino board to power Bluetooth module, and connect common ground pin of power supply/battery, Arduino board and Bluetooth module.

VEHICLE TRACKING

This is regarding 'Vehicle Tracking System Based On GPS and GSM' DIY article published in April issue. After the LCD shows GPS initialisation, no GPS range is found. Please guide me.

Onkar Bhokare

The author Vivek Kamboj replies:
It seems your GPS is not getting a signal from the satellite. Place your GPS module outdoors (on the roof or near the window) and check whether the GPS module is getting power supply from the DC adaptor or not.

WIRELESS AUDIO AMPLIFIER

What is the application of 'Two-Channel Wireless Audio Amplifier Using Bluetooth and TA8210AH' project?

Augustina Sarpong

EFY. This is basically a wireless sound amplifier system. You can use it in cars, homes, seminar halls and so on.
