

Electra Meccanica single-seater electric vehicle

IBM model for universal quantum computer

Rocketbook is a 'connected' endlessly reusable drawing book. Its app helps you scan and send your (or your children's) drawings or hand-written notes to anyone you wish, or save forever with connected cloud services.

Electra Meccanica is a single-seater electric vehicle, so beautiful that you may like to leave your SUV and start driving it instead. The company is in talks with Mahindra & Mahindra to start its production in India. The only problem: It is priced at around US\$ 15,500 at present.

Artificial Intelligence

IBM Research had put on display its model for commercially available universal quantum computer for business and science. Such computers work under extremely cold cryogenic temperatures. 'IBM Q' quantum systems and services will be delivered via the IBM Cloud platform. However, quantum computing—though operational (as claimed by IBM)—is still in very early stage of research.

In robots category, there were many companies displaying their latest robots. LEGEE-668 floor-cleaning robot can do vacuuming,

dry mopping, auto water-spraying as well as wet mopping. It has an advanced navigation system to scan the whole space and plan the cleaning path within seconds.

Sanbot Max robot claims to work like an employee for you 24 x 7 without any salary. It can work as a receptionist in an office or as a sales person in a store. As a receptionist, for instance, it will answer any visitor question, register and escort the visitor to the designated waiting area.

Smart vehicles

Quite a few companies including Nissan, Vanderhall, Mercedes and BMW displayed their concept vehicles.

Smartcircle Technology's model S1 is the world's most compact and lightweight e-bike. Weighing only 7kg, the carbon-fibre S1 can be folded in five simple steps into a small backpack and carried anywhere. Feature-rich with iOS and Android apps, Smartcircle S1 can be a boon for a connected commuter.

Relync from Relync Tech is the world's smartest e-scooter. It can be folded in three seconds and carried in the trunk of a car or on an airplane. The e-scooter is packed with features for extra safety, greater convenience and multi-level security.

The smart vision EQ fortwo, a beautiful autonomous compact car from Daimler Group, dispenses with a steering wheel and pedals.
