

It “provides a new vision for urban mobility and individualised, highly flexible, totally efficient local public transport: the autonomous concept vehicle picks up its passengers directly from their chosen location,” according to the company.

Another very attractive electric vehicle on display was 2018 Edison² black beauty from Vanderhall. This two-seater generates 180HP and has an estimated range of about 320 kilometres on a single charge.

TVs

Hisense displayed their premium ULED TVs with ultimate contrast. These are equipped with prime array backlight, an advanced system with local dimming upwards of 1000 zones and unique ways to control these.

Samsung and TCL demonstrated their QLED TVs. QLED stands for quantum-dot light-emitting technology. Such TVs are capable of emitting brighter, more vibrant and more diverse colours.

Samsung's latest slogan (seen at CES) is “Do What You Can't”—implying an attempt to break the barriers of technology. It shows the company's willingness to remain at the forefront of technology.

A great attraction at Samsung pavilion was The Wall—the world's first modular microLED 371cm (146-inch) TV. It is a self-emitting TV with micrometre (µm) scale LEDs, which are much smaller than current LEDs, and serve as their own source of light. The MicroLED technology eliminates the need for colour filters or backlight, yet allows the screen to offer an excellent viewing experience.

LG showcased their OLED, Super UHD and the new ThinQ TVs. Super UHD TVs claim rich and accurate colour from any angle, now with enhanced black colour. ThinQ TVs also function as smart home hubs, offering access to other compatible smart home products such as robotic vacuum cleaners, air-conditioners, air-purifiers, smart lights, smart speakers and many other devices that can connect to the TV via Wi-Fi or Bluetooth.

Care and Healthcare

Wearable devices like smart eye glasses that can help in relaxation, meditation or sleep apnea treatment, seem to be a new field that is fast emerging.

The smart driving sunglasses from Glatus react to drowsiness for fatigued drivers and react to sounds for hearing-impaired drivers for a safe driving.

The brain-sensing eyewear from Muse helps you relax or sleep peace-

fully, which is becoming a problem for many due to their hyper-active brains that are unable to focus on anything for long enough, or even relax.

Spopad is a kind of rubber pad (available in various shapes) that sticks to your belly and electrically stimulates its muscles to help you lose some excess fat. It can be worn discreetly under the clothes so you can use it anywhere. It is also available for arms, legs and buttocks.
