Phone covers are just for keeping smartphones safe from any external damage—right?

Well, let's change that notion! We came across some innovative and attractive smartphone covers that can do much more. For instance, how about adding an extra battery pack to your mobile? Or, adding another 64GB to your phone's storage along with its

original expandable SD card? Most of these cover designs have been launched just recently but gained quick popularity. Here are a few of the modular phone cases that can add a punch to your smartphone.

Nexpaq—it's like Lego!

If you thought clicking your lock button and turning the screen on are the only things your phone cover could do, think again. Nexpaq Inc. has designed and created a modular smartphone case that can be modified with different customisable blocks to enable various functionalities.

Nexpaq has come up with 12 different modules that can transform your smartphone into a superphone. You can add a battery pack and double your phone's capacity. Stretch your phone's expandable memory by adding an SD card slot module or an additional 64GB hard drive. Want your phone to become a mini speaker? Add the amplified speaker block. Set up extra USB ports for better connectivity.

There are even more options—you can add an extra LED light, turn your phone into a temperature and humidity monitor, or even use it as a breath analyser!

Using the modules is easy. Just plug a module into an empty slot, like a USB port, and enjoy.
