

Lenovo K8 Plus

Panasonic Eluga Play 700

and faster clock speed (mentioned in gigahertz on the box). Quite a few smartphones come with over 2GHz octacore processors.

Display. If you are comfortable carrying around a big phone, go for at least a 12.7cm (5-inch) screen. Phones with 14cm (5.5-inch) screen provide better viewing experience.

To get the best display, tally the resolution and pixel density mentioned alongside the screen size. It is recommended to ensure a screen resolution of 1920x1080 pixels (Full HD) on a 14cm display. 1280x720-pixel (HD) resolution will suffice for a comparatively smaller screen (12.7cm). Pixel density determines the compactness of the display. It should be at least 320ppi.

The final consideration point is the display and panel technology. Liquid-

crystal display (LCD) screens cost less but are quite reliable. Active-matrix organic LED (AMOLED) displays have better visibility under direct sunlight and consume less battery power than LCDs. However, AMOLEDs are costlier and may age faster than LCDs.

For panel technology, go for in-panel switching (IPS) over thin-film transistor (TFT) since IPS provides better colour contrasts and viewing angles.

RAM. The phone's operating system (OS) and user interface (UI) consume a major portion of the RAM, leaving the rest for the applications to run. While at least 4GB should be the optimal choice, it is advisable not to settle for phones with RAM below 3GB.

Battery life, camera and storage. For all three of these specifications, follow the rule "the more, the merrier." Look for a phone that offers a battery life of over 3000mAh.

Cameras have become the USP of many phones. A phone with 13-mega pixel (MP) or higher-resolution rear camera is a good choice. Front cameras are also improving dramatically. Pick a front camera with 8MP or higher resolution.

Also, ensure internal storage of at least 32GB that can be expanded up to 128GB or more. Some phones come with a hybrid expansion slot. This means you can either add another SIM card to the slot or expand the memory with an SD card.

What to buy

Year 2017 was good for smartphone hunters and year 2018 looks promising as well. Here are a few good picks from the market.

Lenovo K8 Plus. Launched in the last quarter of 2017, Lenovo K8 Plus packs almost all the recommended features. The base model, priced at ₹ 9999, is powered by a 2.5GHz Mediatek Helio P25 octa-core processor and 3GB RAM. The rear of the phone homes a strong 13MP + 5MP dual camera with dual LED flash. The front camera is 8MP. The 13cm (5.2-inch) Full HD display uses IPS technology. The phone also has a fingerprint
