to build and run applications including aerospace, automotive, consumer products, industrial equipment and medical devices.

Cisco IoT Cloud Connect. It offers new ways to manage and store data in the cloud and data centres. Its features include voice and data connectivity, SIM lifecycle management, IP session control, customisable billing and reporting.

Verizon ThingSpace. It is a simplified way to go from prototype to production. The API allows to add and activate devices, check their status, monitor their usage, and perform other device connectivity management tasks through a REST API.

Bosch IoT suite. It offers users complete safety and reliability while storing the data. It is a flexible IoT platform based on open standards and open source. Its cloud services meet the requirements typical of IoT projects.

Samsung ARTIK smart IoT platform. This integrated smart IoT platform provides the fastest path to secure and interoperable IoT products and services.

To sum up

As IoT applications grow, so does the demand for sensors. There are a wide variety of sensors available. But for an IoT application, choosing the right sensor as well as the right IoT platform is important. **EFY**

Replace

High Mast Metal Halide / Sodium Lights

with

Binay PowerLED

HIGH MAST LIGHTS

With Binay DRIVER-LESS DC Bus Technology

and save more than over

70%

POWER

5 YEARS warranty

- DRIVER-LESS Operation with BINAY DC Bus Technology
- High Reliability with "Ground-Level" Maintenance Convenience
- Replaces 400W/800W Metal Halide
- Reliable Operation even at High Ambient Temperatures
- IP65 rated
- ON Time less than 0.5 seconds
- High Lumen Maintenance over lifetime
