is application-specific standard products (ASSPs). ASSP revenue will grow owing to an improved outlook for graphics cards used in gaming PCs and high-performance computing applications, a broad increase in automotive content and a stronger wired communications forecast.

AI and digital assistant sales to surge

More than five billion consumer devices supporting digital assistants will be in use in 2018, with almost three billion more added by 2021—according to IHS Markit, a critical information, analytics and solutions provider.

Despite this growth, there are still some hurdles to overcome before consumer adoption is widespread. "Amazon has a clear lead over rivals Google, Apple and Samsung in terms of the numbers of skills and third-party apps and services supported by its Echo products, but more needs to be done by all platforms to help users discover new skills and uses for the technology," said Jack Kent, director, operators and mobile media, IHS Markit.

Video surveillance will continue to be a critical component of the smart home in 2018, with video cameras and video doorbells representing nearly 20 per cent of devices shipped into the smart home globally this year. As such, video surveillance will become even more intelligent by pairing noise classifications, voice and facial recognition, and allowing consumers to filter what is most important in their daily lives.

With heavyweights Google and Amazon aggressively ramping up competition in the space, smart speakers have risen in prominence over the last year, as both standalone products and voice-based interfaces to the smart home. In fact, 39 million smart speakers are forecast to be shipped globally in 2018, up sharply from 27 million units shipped in 2017.

Acer to bring Amazon Alexa to PCs
