X-ray inspection system

Traditional X-ray technologies are limited in inspecting components like BGAs, LGAs and THT components. Omron's VT-X750 incorporates computed tomography (CT), enabling high-precision, X-ray imaging to perform precise and reliable analysis of these hidden soldered areas.

It can accurately inspect soldered defects such as Head in Pillow and voids within BGA and LGA devices. It also measures percentage solder, including voids in QFNs, and Barrel Fill in through-hole devices.

VT-X750 is claimed to be the fastest 3D-CT on the market, performing inspections at speeds of less than 4ms per field-of-view (FOV).

Automated test and measurement system design software

NI has introduced a new release of LabVIEW NXG (the next generation of LabVIEW engineering system design software) that allows engineers to test smarter. Quickly set up your instruments, customise tests to your device specifications and easily view results from any web browser, on any device.

This release introduces the WebVI, a VI type for building web-based user interfaces that can be deployed to any web browser (PC, tablet or phone) with no plug-ins or installers. Additionally, to reduce hardware configuration time, SystemDesigner feature automatically

discovers connected hardware, displays installed drivers and directly links to available NI and third-party instrument drivers if they are not yet installed.

Cybersecurity DPI solution

Rohde & Schwarz Cybersecurity has delivered an embedded deep packet inspection (DPI) engine that serves as the core for Barracuda's next-generation firewall F-series. The Barracuda F-series

firewall is able to classify network applications up to Layer 7 in real time, and can granularly control what applications are permitted, prioritised or de-prioritised for access. By embedding R&S PACE 2 DPI software, it can identify services like Voice over IP (VoIP) while maintaining a high bandwidth, even if settings are being changed to reprioritise applications on the fly.

Multifunction meter

MECO has introduced a simple and easy-to-use multifunction meter to monitor electrical energy consumption of appliances like refrigerators, washing machines, microwave ovens and LED lights.

The new PowerGuard (PG08T) has a built-in timer and relay function for load power on/off, tariff and money function to know your spending/saving on electricity, three-pin socket and plug suitable for Indian sockets (external adaptor not required), and bigger LCD with backlight.

Edge AI platform

MediaTek has unveiled NeuroPilot edge artificial intelligence (AI) platform to

enable an increasing number of consumer devices with AI capabilities. According to the firm, "using a combination of hardware and software, including an AI processing unit (APU) and NeuroPilot SDK, AI can be brought to its wide-ranging technology portfolio that powers billions of consumer devices a year including smartphones, smart homes, autos and more."

The NeuroPilot AI platform supports mainstream AI frameworks—it operates in concert with existing neural processing SDKs including Google TensorFlow, Caffe, Amazon MXNet, Sony NNabla and more.

DC-DC converters

Artesyn Embedded Technologies has announced two new models in its ADO300 300W eighth-brick converter series, providing single 3.3V or 5V outputs. ADO300 digitally-controlled DC-DC converters can handle an input range of 36-75V, and deliver up to 60A output current at 3.3V or up to 60A output current at 5V output voltage.

The ADO300 converter series features 95.2 per cent full-load efficiency with excellent thermal performance. It has an enhanced pre-bias start-up capability. For high-current applications, two converters can be connected in parallel, automatically using droop current sharing.

Smart video IP phone

Matrix has added Sparsh VP710 smart video IP deskphone to its product portfolio. Besides classy looks and reliable architecture, the phone has a 17.8cm (7-inch) multi-touch intuitive touch screen, an in-built USB port, Bluetooth connectivity and an easy-to-use interface. Based on Android platform, the phone can be easily used by any employee without training.
