140cm model:
₹ 76,990

Japanese brand Sanyo has unveiled its first 4K Smart TV models. The new models (XT-49S8200U and XT-55S8200U) feature a simple yet elegant design that seamlessly blends in with your home's decor. Available in 124cm (49-inch) and 140cm (55-inch) sizes, these sport a resolution of 3840x2160 pixels with HDR and MEMC technology, providing

detailed and crisp pictures. Two 10W box speakers provide a clear sound.

The TVs support apps such as Netflix, YouTube, Hungama and YuppTV among others. With three HDMI and two USB ports, you can easily connect the TV to other devices as well. Built-in Wi-Fi lets you enjoy seamless home entertainment.

Curved-Screen Notebook

For ultimate gaming enthusiasts

Acer Predator 21 X is claimed to be the world's most powerful gaming notebook with a curved screen. Featuring a 53cm (21-inch) IPS display (2560x1080 resolution with 120Hz refresh rate), it delivers a truly immersive gaming experience, especially when combined with the Predator's eye-tracking technology from Tobii. Eye tracking lets gamers identify enemies, aim and take cover simply by gazing at objects on the screen in over 45 titles.

The notebook features an unlocked 7th generation Intel core i7 k series processor, five cooling fans and dual NVIDIA GeForce GTX 1080 GPUs in SLI for unmatched graphics

Smartphone with OLED Display

Featuring premium cinematography

LG has added a new model to its V series of smartphones that is said to include many industry-first innovations. Named V30+, the smartphone features F1.6 aperture camera lens, glass crystal clear lens, OLED FullVision display, cine video mode for producing movie-quality videos, premium sound with advanced Hi-Fi Quad DAC, voice recognition and wireless charging.

The QHD+ (2880x1440) OLED FullVision display offers faster response time with minimal after-images when viewing an action-packed movie or playing a game with quick movements. With a large 15cm (6-inch) 18:9 OLED FullVision display, the V30+ is 8mm shorter and 3mm narrower than its predecessor, resulting in a firmer, more confident grip.

It runs on the robust Qualcomm Snapdragon 835 Mobile Platform to support Daydream, Google's platform for high-quality, mobile virtual reality (VR). With Daydream, users can explore new worlds, enjoy personal VR cinema and play games that put them in the centre of the action.
