

smart rather than having a smart home. Not just a smart shower, even a smart hair-brush makes so much sense for me," says Megha.

She adds, "Since I live in a small apartment, each space is utilised for multiple purposes. My dining table is often my work table as well. I have already installed smart lights in that area. Now that Ikea is launching products in India, I look forward to buying their table lamps and table for they'll help me charge my phone and laptop much easily and wirelessly."

Ikea, in its humble attempt, is refining technology for use by all. Reading about smart gadgets online is just one side of the coin, discovering it in person is a completely new experience. Wireless chargers and pads in Ikea's furniture have been integrated by technology firm Qi. According to the company, virtual voice assistants like Alexa by Amazon, Siri by Apple and Google Assistant will play a bigger role in people's lives in the future. It is trying to integrate its smart offerings with not just one but all of these solutions as it wants to cater to a wider set of audience.

Not just Ikea, Faoma too has an exclusive range of tech-automated furniture, both for commercial and personal usage in luxury segment. Its signature product, automated pilasters have a secret code access, which makes them perfect for storage.

Recently, the world's largest furniture retailer, Ikea, launched its smart furniture range. And, suddenly, the world around me started to seem different. I couldn't stop marvelling at the fact that my table will now charge my phone wirelessly with built-in charging spots.

"With the advent of smart technologies, it all just seems to be coming together for me. I am a software engineer. For the last two years, I have been questioning the logic behind the pile of smart devices in our house. And then I learnt about smart furniture and how it can help me to complete my routine chores more easily and at a much faster pace. Now I focus on making my home

Italy's Ozzio, on the other hand, has created a table that you can turn from a regular coffee table to a glamorous, upbeat dining table at the click of a button.

Yet another smart product redefining comfort furniture is Hi-Can's Canopy bed. It comes embedded with a wide range of technological features. You can control lighting through blinds and optimise it according to your mood. You can lift the bed to sit upright. The main attraction, however, is the state-of-the-art theatre and sound system installed in the bed. The bed also has a built-in PC and a complete gaming and entertainment solution.

Who doesn't love waking up to the sound of their favourite music? Florian Schaerfer offers an innovative bedsheets with built-in best-in-class touch-controlled alarm clock. It also has an embedded radio system that allows you to listen to morning news hassle-free.

The universe that started with a big bang is soon going to explode with technology. With all these mesmerising options of smart, automated furnishings, we are surely headed towards a multidimensional future in the flatly round world. **EFY**
