

Walk the talk

To me, smart wearables are all about creating a comfortable, integrated and tech personified version of myself. I'll only invest in these if they become a part of me without feeling like an external burden.

Smart shoes seem to keep up to that expectation. These shoes are magical, for they auto-fit, keep track of my calories and step count, and help me become healthier and smarter.

Feel like Iron Man

Google Glass makes your Iron Man dream come true. Using this, you could do away with a phone's screen and just have the information projected directly onto your glasses. The first version was criticised for battery, streaming and privacy issues. Despite that, Google believes in the strength of the product and is working on an improved version of the same.

Dress smart

Activewear retailed by companies like Athos Gear, Heddocko and OMsinal are clothing with inbuilt biometrics that tell you about your workout regimen's efficacy. These tell which muscles are being flexed and which ones are hardened, how fast your heart is beating, or how fast you are racing.

Microsensors have made smart apparel a reality. The dream of having invisible tech gadgets to help better our day-to-day lives is slowly unfolding into a beautiful undeniable truth. **EFY**
