

NEW-AGE DEVICES FOR A SMARTER LIVING

Paromik Chakraborty

Smart technology has gained immense popularity in recent years. Smartphones have been the kickstarter of the smart revolution in homes. Today there are gadgets to prepare your coffee before you wake up, turn on your room's airconditioner while you are driving home from work, and water your plants while you are on vacation. This article introduces to you some smart devices for a better living, though you may already be aware of some of them

Robotic cleaners

Robotic cleaners have arrived in the market to take up domestic cleaning tasks. Floor cleaning robots allow vacuum cleaning as well as wet mopping of floors and other flat surfaces. Higher-end robots can also perform functions like swimming-pool cleaning and your lawn's maintenance.

One interesting feature of all these robots is automated sensing of stairs to prevent a fall. Another fun factor is that these robots automatically retreat towards the charging dock when out of charge.

The robots come in various sizes and prices. The basic dusting robots start at ₹4000. For example, Milagrow's Roboduster costs ₹3500 only. Proper floor cleaners cost over ₹18,000. Brands like ReadyMaid, Milagrow and iRobot, which have recently entered the Indian market, bring you a substantial list to choose from. With timely maintenance, these cleaners can take the load of strenuous chores off you and ensure a better living.

Wireless speaker systems

Wi-Fi connected speakers are good for audio-philosophes. You can install any number of speakers across any number of rooms and control them from a single mobile application, provided all of them are configured on the same Wi-Fi network. You can choose to play the same audio through all the speakers or play different tunes across different speakers. Some speakers also come with voice command and AI support.

Bose Soundtouch is a popular option in the market, starting at ₹15,000. The Sonos Play series, starting at ₹20,000, is another recommendable option. Amazon's Echo series AI-enabled speakers cost around ₹10,000.
