

A smart city improves every sphere of life, from environment to education (Source: Deloitte)

enterprises to access such databases in order to get the most out of the data in a profitable way. For example, a private company developing a traffic management system can be allowed to access data collected by the existing infrastructure, for a fee, instead of having to redo the whole thing. This not only turns the government's investment profitable but also makes the infrastructure more streamlined without too much duplication.

A Gartner report adds one more important element to this framework—people. According to Gartner, people themselves will become nodes on the Internet, with both static information and a constantly emitting activity system. Today, there are multiple apps that use crowd-sourced information to make better buying decisions, avoid traffic congestion,

Components of a smart city

1. Connected devices like sensors, kiosks, cameras, lights, traffic signals, waste bins and what not
2. A reliable, efficient and secure network that connects everything together
3. Smart and open data management systems for collection and analysis of data from the devices
4. Applications that put this information to good use
5. Processes that streamline the collection, analysis and use of data by different systems

explore places and more. It is only fair then that people are considered one of the main resources of a city's smart infrastructure!

POCKET SIZE DIGITAL MULTIMETERS

- 3½ Digits 4000 Counts (101B+)
- 3½ Digits 6000 Counts (108B+ TRMS)
- Auto Ranging
- TRMS Measurement (108B+ TRMS)
- LCD with Backlight
- Upto 1000V DC
- Upto 750V AC
- Upto 10A DC / AC
- Upto 40MΩ (101B+)
- Upto 60MΩ (108B+ TRMS)
- 4.000nF ~ 4.000mF (101B+)
- 9.999nF ~ 9.999mF (108B+ TRMS)
- 99.99Hz ~ 20.00MHz
- 0.1% ~ 99.9% Duty Cycle
- RELA (101B+)
- -20°C ~ 1000°C (-4°F ~ 1832°F) (108B+ TRMS)
- K Type Thermocouple (Upto 260°C) (108B+ TRMS)
- Diode Test, Audible Continuity, Data Hold, Auto Power Off, & Low Battery Indicator
