CAD, since CAD systems support GDS.

New features of Lasi 7

For better and enhanced user experience, changes have been made to the main editor and a few utility tools. Tools not required have been turned off as these often cause unnecessary redraws on some versions of Windows. To include the recently made changes, add-on tools have been recompiled.

Users can now hide or unhide 'tooltips' section, depending upon usability, using the Cnfg command and also by checking and unchecking the tooltips button.

A lot of minor changes have also been made in the help feature for files and web pages. **EFY**
