

The framework supports up to 80MHz of real-time bandwidth and full bidirectional communications and includes MAC layer features including CSMA/CA, RTS, CTS, NAV and retransmission.

8051 development kit

ARTECH Electronics has launched A-123, an advanced microcontroller kit for 8051 developers. A-123 includes all peripherals on a single board. It uses IC ZIP socket to allow easy replacement of microcontrollers. Its separate 5V and 12V power supplies can drive different peripherals.

The experimental board includes almost all major embedded attributes like serial communication, interrupt base, and multiple seven-segment displays. It also includes DC and stepper motor along with relays.

Automated X-ray inspection system

Omron claims to have introduced the world's fastest inline automated X-ray inspection system, VFX750. The new system increases automated inspection speed based on 3D-computed tomography (3D-CT). The expanding inspection logic enables full, in-line inspection coverage. Unique 3D-CT reconstruction algorithms provide solder-shape recognition and defect detection. Dense and dual-sided board design can present challenges for X-ray inspection. However, Omron's 3D-CT technology can overcome such design restraints.

IoT modem

Unisem Electronics' new GSM/GPRS modem is based on the wireless, low-power SIM800C module (quad-band GSM/GPRS solution), enabling rapid IoT application development.

The modem can be powered by a standard 12V supply or a single-cell

Lithium-ion battery. It has TTL inputs/outputs, UART and USB connections on the board, allowing users to connect with the MCU or PC to transfer data/send AT commands and update firmware for the module, respectively. There is also an option to switch between RS232 and UART (TTL) using jumper settings. The modem is easy to scale and customise.

MCU platform

Enabling developers to quickly and securely connect Internet of Things (IoT) endpoints to the cloud, Texas Instruments has integrated new Amazon FreeRTOS into SimpleLink microcontroller (MCU) platform. The integrated hardware and software solution enables developers to quickly establish a connection to IoT service out-of-the-box and immediately begin system development.

TI's SimpleLink Wi-Fi CC3220SF wireless MCU LaunchPad development kit, which supports Amazon FreeRTOS, offers embedded security features such as secure storage, cloning protection, secure bootloader and networking security.

MISCELLANEOUS

Dome network camera

VIVOTEK has launched a multi-adjustable sensor dome camera, MA8391-ETV. Featuring four independent 3-megapixel CMOS sensors, MA8391-ETV allows users to simultaneously view four different areas while occupying only a single IP address. This not only reduces the installation time and total number of cameras needed but also management effort and maintenance costs. Due to its unique and small design, the camera is perfect for surveillance of large areas, such as parking lots and shopping malls, as well as spaces like hallways intersections and building corners.

Biometric attendance system

To meet government organisations' requirements for employee time tracking, Matrix has introduced a fingerprint and RFID card based, Aadhaar-enabled time-attendance terminal. Cosoc Vega Faxq is claimed to be the first embedded Linux-based, Aadhaar-enabled biometric device registered on AEBAS server. The device offers unique advantages in terms of connectivity, technology, usage environment and ease of use. It supports fingerprint as well as Mifare smart card as credentials.

Floodlights

NTL Lemnis has launched PharoX Flare Plus floodlights in 40W, 80W, 120W and 160W. These professional-range floodlights are claimed to meet optimal lighting requirements while being energy-efficient.

The 40W and 80W versions are general lights suitable for high lighting, area lighting and indoor lighting in areas such as airports and atriums. The 120W and 160W versions are more tuned for crane lighting and light towers, and therefore find industrial and outdoor lighting applications.

These floodlights cost ₹ 5200 for 40W, ₹ 10,400 for 80W, ₹ 15,600 for 120W and ₹ 20,800 for 160W.

Solar inverter

Luminous' Regalia wall-mounted inverter battery system directly powers your home and charges batteries using the regular mains along with the option to convert solar

energy into electricity to create an effective power backup for at least ten hours. The system uses Wi-Fi connection and a mobile app to configure with users' smartphone and update them on the amount of electricity being consumed by their electrical appliances and the status of their inverter battery. It also enables them to control their electrical appliances with the help of its smartphone application.
