layers and plastic boots, outdoor enthusiasts can push things further. They can withstand harsher environments and much difficult terrains with the grip and durability that tactical boots provide.

Shoes from Hi-Tec come with a special technology, which provides a removable ethylene-vinyl acetate (EVA) footbed and a compression-moulded EVA (CMEVA) midsole.

Camera

Until recently, documenting and photographing expeditions was tough. The equipment was big, not weather-proof and had limited range.

Today, as obvious as it sounds, one can store thousands of photographs in a tiny microSD card. This was only possible with hundreds of camera rolls before.

Drones and POV cameras have given trekkers an entirely different angle for footages that could not be thought of before.

Medical equipment

Portable oxymeters and BP meters make sure that everyone participating in an outdoor expedition is medically fit and of sound mind to continue the expedition.

Communication devices

With the invention of very high-frequency radios and satellite phones,

people who venture outdoors are always connected to the base stations or with their team members. Thousands of lives have been saved because of such devices, which can be used for calling for back up in emergency situations.

Satellite phones from Garmin are quite popular among hikers in India.

Navigation

Gone are the days when one needed to carry multiple maps on paper. Today, a GPS enables recording of all milestones on the way. One can even download the entire map of an area on a smartphone before venturing out. Using Google Maps offline functionality, one can track distances covered easily through a smartphone, as well. **EFY**
