

OPEN-SOURCE MACHINE VISION CAMERA MODULES

The OpenMV Cam is a small, low power, micro controller board which allows you to easily implement applications using machine vision in the real-world. You program the OpenMV Cam in high level Python scripts (courtesy of the MicroPython Operating System) instead of C/C++.

OpenMV Cam M7

OpenMV Cam M4 V1

The OpenMV Cam features:

1. The STM32F765VI ARM Cortex M7 processor
2. OpenMV Cam will appear as a Virtual COM Port and a USB Flash Drive when plugged in.
3. OpenMV Cam records video and easy pull machine vision assets off of the SD card.

RG-616 MULTI COIN ACCEPTOR

- Capable of accepting upto 6 types of all worldwide Coins & Tokens. Intelligent CPU software control, and high accuracy
- Self-programming without PC, Automatic self-test for problems
- Free to set up pulses output
- Prevent not only electric shock but also electromagnetic interference

Multi coin acceptor can accept up to 6 kinds of different coins at the same time. This type of coin selector is widely used in Vending machine, Arcade Game, Message chair and other self-management system.

Multi coin acceptor is mainly based on material, weight and size to identify coins. We use the most up to date algorithm to design software, therefore Multi coin acceptor is very stable and accurate even when environment changes, such as temperature, humidity etc.
