EFY PLUS MAGAZINE DVD DISCONTINUED

Thank you for sharing the update! I agree with the decision to discontinue EFY DVD. But, it will be good if EFY can provide links of useful utilities software either in the magazine or on the website. I understand that these days all software are available online. However, having all relevant software at one place makes it convenient for the users/readers.

❑ Your decision to stop EFY DVD is a good one. I will always continue my association with EFY. Thanks!

Satyendra Kumar

❑ The decision to discontinue the DVD from July 2018 issue is absolutely right. I completely support this change. I am glad you extended my subscription up to February 2019 due to this change. Reducing the number of EFY magazines to only one kind is a good decision, too.

It is good to know that subscribers will continue to get access to the digital version of the magazine. However, the best news (icing on the cake) is that EFY magazine will complete its 50th year this December (golden jubilee). That is simply awesome! Keep it up, and keep it going!

❑ It is a totally wrong decision to stop DVD issue. I am a reader of EFY magazine since 1986. After a decade of the plain issue, EFY started giving a CD with the magazine. This ran till 2008. Then came EFY Plus, which came with a DVD. Now, EFY Plus has also been discontinued, and we are back to the old, plain issue.

Electronics Projects

In 'Design Your Own Li-Fi Dongle And Speaker' circuit available on <https://electronicsforu.com>, what modifications are required if we use 3W LED instead of 1W?

Lone Wolf

EFY. You can increase the wattage of resistor R7 to 2W, keeping the value of resistance the same.

I like 'Simple Suitcase-Lift Alarm' circuit available on <https://electronicsforu.com>. Can I increase or decrease the sensitivity of the alarm?

Mario

EFY. Thanks for the feedback! Sensitivity depends on the sensor used. In this example, sensitivity cannot be increased or decreased with the current design.

Hi, thanks for publishing 'Humidity And Temperature Monitoring Using Arduino With The IoT' DIY article on your website, <https://electronicsforu.com>. I would like to know which microcontroller is used in this circuit? Also, would RFM95 be required to transmit the readings from the sensor?

Hafiz

EFY. Thanks for the feedback! Since Arduino Uno board is used here, the microcontroller is ATmega328. ESP8266 Wi-Fi module is used to transmit sensor signals to the cloud. Hence, RFM95 is not required in this project.

EFY. Thank you for being an avid reader of EFY magazine since 1986! It feels nice to know that you have continued with EFY magazine despite all the changes we have made in the past.

At EFY, we try to keep the interest of the majority of EFY readers in mind before taking any serious decisions.

After all, the magazine is being produced for the benefit of the readers and not our own!

It seems some of you do not agree with the decision of discontinuing DVDs. If you could let us know the reasons for the same, it might help us in finding solutions to the problems you (and some others) might face after discontinuation of the DVDs.

EFY SOURCE CODE

Although, I welcome the decision with regards to discontinuation of DVD, I would like to know whether source codes required for DIY projects will be available in the print edition.

K.G. Raghunathan

Through email

EFY. Thanks for the feedback! Everything will be the same, except that there will be no DVD. This means, the code(s) related to DIY projects will be there in the print version. However, if the source code(s) take up more than one page, the same will be uploaded on our website for free download.

HOME AUTOMATION

I need an Android-based home automation project using Arduino to control all devices.

Lalit Pal
