

Eon AVR Platform

Visit: www.eonreality.com/platform

Full version: Paid

Eon Reality has come up with an innovative training platform utilising augmented reality (AR) and virtual reality (VR) technologies, called Eon AVR Platform. It can be used by enterprises to train their workforce, or by educational institutions for their students. AVR Platform contains three main modules. First is Creator AVR, which provides simulated lessons on various subjects. It can be used to create subject matter and material for reference and study. Second is VR Trainer, which is a VR-based interactive hands-on training interface. It can be useful for enterprises to train their workforce digitally about their practical assignments before deploying them for work in real life. It provides clear insights on various metrics like trainer-trainee collaboration and progress reports, and advanced analytics to understand the level of employee preparedness. The final module is AR Assist, which is an AR-based digital assistant for workers on site. The platform is Internet of Things (IoT)-connected to help the workforce identify objects and issues in real time. The software can integrate existing databases or create new ones for all modules. Eon AVR Platform is cloud-connected, enabling users to access data anytime, from anywhere.

EASY And FUN APPS For Robotics And VR

Scan the QR codes to download the apps based on the operating system of your device

EZ-Builder

Updated: April 2018

OS: Android and iOS (7.0 or above)

Download: Free

Android

iOS

EZ-Builder allows you to control your robot(s) from your mobile device. Its simple graphical interface allows RoboScratch programming and script modifications, which can deliver robotic features like navigation algorithm, vision tracking and recognition, audio/video streaming and so on. It can control almost any robotics project developed on Windows EZ-Builder (easy-to-use graphical robot-programming platform available at www.ez-robot.com/EZ-Builder for Windows PCs). The project can be accessed through EZ cloud. EZ-Builder app supports movement controls for popular robots like Roomba, Servos and Motors. It comes with Wii Remote emulator and, therefore provides you the usage of WiiMote.

E-Robot

Updated: December 2017

OS: Android (4.0 and above)

Download: Free

A relatively new automation application, E-Robot has a simple interface to let you set algorithms for your device, to execute functions and debug the programs. Commands are written based on events and triggers. The application supports 150 action types and 170 event types, each of which can be parameterised for better execution. You can

Android

assign manual operations for actions as needed. It collects position data based on geo-coordinates set by Wi-Fi networks or cellular data. The app supports JavaScript programs. Backup and full restore feature is also available. E-Robot is available for Android only as of now.

Mobile VR Station

Updated: June 2018

OS: Android (6.0 and above) and iOS (8.1 and above)

Download: Free trial-version; paid for full app

Android

iOS

Mobile VR Station is a great tool for viewing normal photos and videos (both 2D and 3D) using VR technology. Meant for both Android and iOS users, this application is compatible with almost any VR headset. View includes 3D left-right and up-down imagery as well as 360-degree movies. Full version of the app can play up to 4K videos (check device compatibility). Supported formats include .mp4, .m4v and .mov. You can view sub-titles while using and accessing external video content using UPnP and DLNA.

Trinus VR

Updated: June 2018

OS: Android (3.1 or above) and iOS (9.2 or above)

Download: Free

Android

iOS

Trinus VR allows you to play Windows PC games in VR with your existing hardware. You will need a mid-or high-end smartphone (compatible for gaming) with in-built gyroscope, Windows PC, active Wi-Fi connecting both PC and smartphone, and VR headset (Google Cardboard, GearVR, Homido, FreeFly, etc). Trinus VR connects the smartphone to the PC and projects the running game on the connected VR headset. It can project any non-VR PC game, and has support for SteamVR and specific TrinusVR-integrated games.

Cardboard Camera

Updated: February 2018

OS: Android (4.0 and above) and iOS (9.0 and above)

Download: Free

Android

iOS

If you want to experience photos in VR, Google's Cardboard Camera can be a great app to start. You can take panorama and 3D photos with Cardboard Camera. When you view the photos using a VR headset (like Google Cardboard), it provides the very sense of VR of a 3D photo. There are many interesting features to explore in this app. **EFY**
