

Fig. 3: Author's prototype

The first sketch (onoff.ino) turns the laser on and off without sending any information to the serial monitor. The second sketch (laser_status.ino) turns the laser on and off, and at the same time reads the voltage coming from centre pin 2 of the module, which

is displayed on the serial monitor of Arduino. You can experiment with this sketch as follows:

1. Play with the delay in the code for turning the laser on or off, faster or slower.
2. Place a resistor in series with

PARTS LIST

Semiconductors:

Arduino Uno R3 board
KY-008 laser LED module

Miscellaneous:

9V battery with connector
Connecting wires (male-to-female)

the power supply line and then check voltages on the serial monitor.

3. Connect a piezo buzzer to pin 2. Every time the laser turns on, the piezo buzzer will sound an alarm. **EFY**

PROFIT FROM

IOTSHOW.IN

26-28 Feb 2019 • KTO Whitefield • Bengaluru

AN EVENT FOR THE **CREATORS**,
THE **ENABLERS** AND
THE **CUSTOMERS** OF IOT.

IoTshow.in is India's biggest expo-cum-conference on Internet of Things. Its first edition in 2016 was voted as world's top IoT event at Postscapes.com! Let's make the 2019 edition even **BIGGER**—and put India at the centre of the IoT global map.
