

INNOVATIVE AND USEFUL ACCESSORIES FOR YOUR SMARTPHONE

Paromik Chakraborty

Do you remember the last time you stepped outside without your smartphone? Well, I don't! Maybe because a smartphone helps me get a lot of work done while on the move. Here are a few interesting, innovative and affordable gadgets that can make the smartphone experience even better.

Laser keyboards

There are several Bluetooth or wireless keyboards available for smartphones that are compact and light. But carrying even these may not be feasible all the time. Enter, laser keyboard, which is basically a small laser projector (with other accessories). When wirelessly connected to a smartphone, a laser keyboard creates a virtual projection of a keyboard that can be used as an actual physical one.

How it works is that, the laser projector creates a keyboard projection on the nearest surface (table surface, floor or wall). As you type, a sensor in the projector reads your finger movements and positions. An in-built controller unit

deciphers the readings picked up by the sensor and runs specific commands to generate the input you provide. Run on batteries, a laser keyboard can last up to five hours on full charge. Most come with in-built mouse features.

This pocket-size box-like gadget runs with most electronic systems apart from smartphones (both Android and iOS), including tablets, computers, laptops and game consoles. And, it looks great, too!

There are quite a few laser keyboards available in the market. Bluetooth laser keyboards from AGS Corp. cost ₹ 3000 on Amazon. Artek laser keyboards and Epics laser keyboards are available for ₹ 3150 and ₹ 3899, respectively, on Flipkart.

Portable image printers

Imagine how great it would be if you could print your holiday photos as soon as you click them! There are portable, pocket-size printers that can generate coloured prints of images whenever, wherever you want. These devices are controlled via
