

➤ **Technology has become increasingly people-centric and is supported by powerful connectivity. The same is now true for a smart office environment**

Twentieth-century workplaces are primarily influenced by the IT infrastructure of an enterprise. Digitisation is now defining workplace culture. It is responsible for how the workplace operates, performs and manages work styles and relationships. Digitisation has transformed the way we communicate with the internal stakeholders of an organisation, along with external clients and partners.

Sumit Joshi, vice chairman and managing director, Philips Lighting India, shares, "Technology has become

increasingly people-centric and is supported by powerful connectivity. The same is now true for a smart office environment."

Transitioning to a smart workplace

Expected to grow at a CAGR of 17 per cent globally, the concept of a smart workplace looks promising. Transitioning into a US\$ 46 billion space by 2023 can only be projected for a high-value proposition. Organisations that have adapted to the smart workplace culture are delighted by the

returns. They are now replicating the infrastructure for their offices around the world.

Vinod Mathews, director - India real estate and facilities, Amazon, shares, "A smart workplace helps employees to be more efficient and provides them with speed and flexibility. It further assists in identifying the root cause(s) sooner, with predictive analysis. This allows the operations team to proactively address issues, which in a normal scenario are escalated by customers."

"As India's business landscape
