Array disk storage in a data centre

There are several types of solid-state storage devices, from small enough to fit in your pocket to all-flash arrays within data centres that can run entire enterprises

Array-based solid-state drives (SSDs) are manufactured in a variety of lengths (form factors) that can be installed in any storage device. A solid-state array (SSA) is a dedicated all flash storage array. It has its own proprietary data ma

(FC) and Peripheral Component Interconnect (PCI). These are available in various form factors, including 4.6cm (1.8-inch), 6.3cm (2.5-inch) and 8.9cm (3.5-inch).
