Shunt resistors

ROHM has developed a more compact version of its PSR series high-power ultra-low-ohmic shunt resistors for current detection in automotive and industrial applications. The PSR100

series uses a high-performance metal alloy as the resistive element to provide superior temperature coefficient of resistance. In addition, original precision welding technology makes it possible to successfully deliver high power (3W) in a compact 6.35x3.05mm² form factor.

Sensor transmitter

Maxim Integrated Products has introduced an ultra-low-power, highly integrated 4-20mA sensor transmitter. Ideal applications of MAX12900 include industrial automation and process control, loop-powered 4-20mA current transmitters, remote instrumentation and smart sensors. MAX12900 increases system accuracy with 10ppm/°C voltage reference for up to 3.5x lower drift compared to traditional solutions.

Sensor ICs

Allegro MicroSystems has released a new family of 2D Hall-Effect latch ICs that feature both vertical and planar Hall elements. The APS12625 and APS12626 sensor ICs enable reduced system size and bill-of-materials (BOM) cost along with an increase in performance and flexibility due to 2D sensing. These have been developed in accordance with ISO 26262 and

qualified as per AEC-Q100, making them suitable for automotive and other safety systems.

MCUs

Renesas Electronics Corporation has announced 38 new microcontrollers (MCUs) in its RX130 Group. The new MCUs extend flash memory size to 256kB, 384kB and 512kB, and increase package size up to 100 pins to provide higher performance and compatibility with the RX231/RX230 group of touch MCUs. The ultra-low power, low-cost RX130 group adds higher responsiveness and functionality for touch-based home appliances, and building and industrial automation applications requiring 3V or 5V system control and low power consumption.

TEST & MEASUREMENT

Voltage detector

Kyoritsu's 5711 voltage detector senses non-contact voltage through insulation in cables, cords, circuit breakers and switches. Upon AC voltage detection,

a buzzer sounds and the tip glows. Key features include powerful flashlight, dual-range (Hi/Low) sensitivity and compliance to IEC61010-1 requirements.

Insulation resistance tester

Kusam-Meco has introduced a new digital high-voltage insulation resistance tester (Model KM2803-IN) for EHV circuits. This tester is microprocessor-controlled

with advanced safety features. It is auto-ranging and can measure insulation resistance at 0.5kV, 1kV, 2.5kV, 5kV (DC) voltage with insulation resistance in 0-25GW, 0-50GW, 0-125GW and 0-250GW range, respectively. Measuring accuracy is $\pm 5\%$.

Radio communication test station

Anritsu is releasing a new radio communication test station (MT8000A) for developing 5G communication chipsets and terminals. With built-in support for broadband signal processing and beam-forming technologies required by ultrafast broadband 5G communications, the all-in-one MT8000A supports RF and protocol tests for sub-6GHz and millimeter wave bands.

Current waveform analysers

CX3300 series device current waveform analysers from Keysight Technologies precisely visualise low-level current waveforms. Current sensors can measure dynamic current from 100pA to 10A with a maximum of 200MHz bandwidth. Mainframe acquires signals from sensors at up to 1GSa/s sampling speed and 14-bit and 16-bit wide dynamic range.
