

TABLE II
WORKING CAPITAL PER MONTH

1. STAFF AND LABOUR

Description	No. of persons	Salary per month (₹)	Total salary per month (₹)
Supervisor cum manager	1	25,000	25,000
Skilled worker	5	18,000	90,000
Accountant	1	22,000	22,000
Total	—	—	137,000

2. RAW MATERIALS

Description	Quantity	Rate	Value (₹)
LED chips	45,000	4	180,000
Rectifier circuit with filter	3750	20	75,000
Heat-sink devices	3750	5	18,750
Metallic cap holder	3750	10	37,500
Plastic body	3750	10	37,500
Reflector plastic glass	3750	10	37,500
Connecting wire	—	—	5000
Soldering flux	—	—	5000
Miscellaneous	—	—	10,000
Packaging material	—	—	10,000
Total	—	—	416,250

3. UTILITIES

Description	Value (₹)
Power	3000
Water	500
Total	3500

4. OTHER EXPENSES

Description	Value (₹)
Rent	10,000
Postage and stationery	500
Telephone/fax	2000
Repair and maintenance	1000
Transport and conveyance charges	1500
Advertising and publicity	1000
Insurance and taxes	1000
Miscellaneous expenditure	1000
Total	18,000
Total recurring expenditure per month (1+2+3+4)	574,750

- LED chip SMD mounting machine
 - Candlelight assembly machine for LED
 - LED tubelight assembly machine
- Other equipment that may be required:

- Soldering machine
- Sealing machine
- Small drilling machine
- Packaging machine
- LCR meter
- Digital multimeter
- Continuity tester
- Lux meter
- Oscilloscope

Pollution control requirements

The following steps may help to control pollution wherever applicable:

1. Fumes and gases are released during hand soldering/wave soldering/dip soldering, which are harmful to people as well as the environment and end products. Alternative technologies may be used to phase-out the existing polluting technologies. Numerous new fluxes have been developed, which contain 2-10 per cent solids as opposed to the traditional 15-35 per cent solids.

2. CFCs, carbon tetrachloride and methyl chloroform are used for cleaning of printed circuit boards after assembly to remove flux residues left after soldering and various kinds of foams for packaging. Many alternative solvents could replace CFC-113 and methyl chloroform in electronics cleaning. Other chlorinated compounds such as trichloroethylene, per chloroethylene and methylene chloride have been used as effective cleaners in the electronics industry for many years. Other organic solvents such as ketenes and alcohols are effective in removing both solder fluxes and many polar contaminants.
