

mid-level PC can come with a 7th Generation Intel i3 processor. Higher versions may include Intel i5 or even i7. RAM is 4GB. Storage space may vary with offerings: Some systems come with up to 1TB HDD, while others lack an HDD and need to connect to a storage device exclusively. There are four USB 3.0 ports, an HDMI port, a DisplayPort and an Ethernet port.

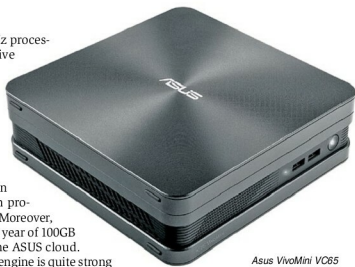

Brix systems support Wi-Fi 11ac standard and Bluetooth 4.0 connectivity. These come with Windows 10 Home edition pre-installed and one-year warranty. The cost varies between \$200 and \$500 depending on the features.

Asus VivoMini

If you are looking for a mini power-computer, go for Asus VivoMini series device. Costing \$500 onwards, VivoMini delivers value-to-cost features. Packing a 6th generation Intel Core

i3 or an i5 3.1GHz processor and a massive RAM of 8GB (expandable up to 16GB), the device can take load. There is a storage option of 1TB HDD and an additional 128GB SSD (on select offers with proportionate cost). Moreover, users get a whole year of 100GB free storage on the ASUS cloud.

The graphics engine is quite strong with an Intel HD integrated graphics card. The device may also support an Nvidia GeForce GT series graphics chip, which can run medium-intensity games at UHD or even 4K resolution. Connectivity options include two USB 3.1 and four USB 3.0 inputs, a 4-in-1 card reader, a LAN port, a display port,

Asus VivoMini VC65

an HDMI and two 3.5mm audio jacks.

VivoMini cost varies depending on the setup. To give you an idea, VivoMini VM65N with an i5 processor and GeForce GT930M graphics card costs \$550. **EFY**

Innovative Adhesives for Medical Devices, Fiber Optics & Applications

Panacol Vitalit®, Structalit® and Cyanolit® Adhesives
Hönle UV-Curing Systems - bluepoint LED, LED Powerline, LED Spot 100

Adhesives

- Certified USP Class VI and/or ISO 10993
- 100% solvent free
- Fast curing with UV and visible light
- Compatible with common sterilization processes

UV-Curing Systems

- High UV-intensity
- Curable with UV-LED only, to eliminate heat
- Easily adaptable to existing production lines
- Optimum quality, efficiency, and value
- LED failure detection for a save process

Optics and Fibre Optics

- Our optics adhesives and cements are used for sealing, holding and joining lenses.
- Special, photoconducting and highly transparent adhesives are used for bonding, securing and coupling glass fibres.
