76 Corporate Security: Digital Is The Way To Go

78 Driverless Cars: Automotive Sector's Next Big Business Bet

81 Test Automation Reduces Quality Assurance Lifecycle By At Least 50 Per Cent

► Unlike hardware solutions, digital services require nominal investment as these work mostly on pay-as-you-go subscription model. Maintenance cost is also almost nil

Reputation of a brand to its employees is as important as to its customers. While workplace satisfaction depends on multiple variables, security is something that remains a constant. Technology has matured sufficiently to make the work premises much safer for employees. With incidences of crimes, violence and misbehaviour at workplaces on the rise, beefing up security with the latest systems becomes imperative.

Ensuring physical security digitally

Earlier, to ensure corporate security, bulky and expensive hardware were

the only solutions available, which needed manual intervention. That has changed dramatically today with digital transformation making security systems not only compact but also more accurate. Security starts right from the entry gates. Apart from physical scanners and X-ray machines, digital authentication systems play major roles.

While biometric systems are well-established authentication devices for employees, visitor and contractual staff authentication is equally important. Kunal Maheswari, co-founder and CEO, OpenSEA Innovation Labs, says, "A lot happens at the reception

desk itself. You might have noticed a large chunk of companies relying on manual registers to store data about visitors or incoming items. There is no validity of these entries and neither are they effective in any follow-up investigations, if necessary."

As a result, technology has stepped foot at entry desks as well. Instant identity authentication and information entry is gaining fast adoption, especially by large companies. To explain its working, Maheswari cites the example of their 'All Is Well' mobile application: "Our application first verifies the visitor through his mobile. The reception
