Electronics Projects

SMART WORLD

The interview 'The Whole Education Market Is Virtually Untapped In India' under 'Smart World' section in February issue is really insightful. Thanks for bringing out such nuggets!

HUFFMAN ENCODING AND DECODING

I want Huffman encoding and decoding article along with MATLAB code. Please help.

Mustapha Usman

Through e-mail

EFY. You can download the complete article including the MATLAB code from our website at <https://electronicsforu.com/electronics-projects/software-projects-ideas/huffman-coding-decoding-matlab>

DC MOTOR CONTROL

The 'Auto Reversible DC Motor With Speed And Rotation Control' DIY project published in June 2017 issue is quite interesting. Is this a mini or major project? Is the ATmega16 used in the project an AVR microcontroller?

Tanuja

Through email

The author Ashutosh M. Bhatt replies:
Thanks for the feedback! It is a mid-level embedded system project using an AVR microcontroller.

DIGITAL IC TESTER

The 'Arduino Based Digital IC Tester Using MATLAB' DIY project published in July 2017 issue is quite useful. I have assembled the project as per the instructions given in the article. However, whenever I insert any IC into the socket, I get 'Faulty IC' error message. I am using R2016a version of MATLAB. I have made some changes in the source

Thanks for publishing '1kw Sinewave Inverter' project on your website at <https://electronicsforu.com/electronics-projects/1kw-sine-wave-inverter-circuit>

I need transformer winding details as transformer setup is the heart of the project.

Lawrence Ajimoti

☐ In the above-mentioned inverter circuit, why are two batteries used? Is it not bulky and costly using 12V, 180Ah batteries?

Deepak JO

The author Dr R.V. Dhekalé replies to Lawrence Ajimoti:

You may contact any transformer manufacturer to get specifications of the transformer used.

Reply to Deepak:

If you want to keep half current in MOSFETs, two 12V batteries can be connected in series for the same power.

In 'RF Controlled Aircraft' project available on your website at <https://electronicsforu.com/electronics-projects/rf-controlled-aircraft>

I got following error messages in the receiver source code:

D:\Program Files (x86)\Arduino\libraries\SoftwareServo

SoftwareServo.h:4:22: fatal error: WProgram.h: No such file or directory

*^ compilation terminated. exit status 1
Error compiling for board Arduino Nano. This report would have more information with*

"Show verbose output during compilation" option enabled in File -> Preferences.

I have installed all the libraries in the correct folder.

Robert

☐ In the above-mentioned project, I am getting following error messages in transmitter and receiver source codes:

*D:\PROJECT\esc\RF-Controlled Aircraft\Source code (4 channel remote) \transmitter\transmitter.ino:125: fatal error: VirtualWire.h: No such file or directory
D:\software\arduino\arduino-1.8.3\libraries\SoftwareServo\SoftwareServo.h:4:22: fatal error: WProgram.h: No such file or directory*

Zorjis

The author Somnath Bera replies:

This is a classical case of trying old sketch (program) on new Arduino IDE.

The project was tested on Arduino Uno and compiled using Arduino 1.1.2.

So WProgram.h file is working fine. However, it will not work on the latest

Arduino 1.6 or higher version.

To fix the error, rename WProgram.h to Arduino.h in SoftwareServo.h and SoftwareServo.cpp files.

code but the problem still persists.

Manoj Kumar Singh

Through e-mail

The author Shibendu Mahata replies:

Please ensure that you use 74xx series ICs because the project is meant for

these ICs only. Also, the project/prototype was tested using MATLAB 2014a and not on MATLAB 2016a version. Unfortunately, I do not have MATLAB 2016a version to test this project right now. However, the published project works correctly for 74xx series of ICs with MATLAB 2014a version.
