The increasing shift from traditional to electronic toys due to exposure to technology at an early age has led to the increasing demand for technologically-driven toys. Therefore there is scope for the industry to thrive and sustain

Toys have gained significant importance not only for children but also for grown-ups. Children use toys to discover their identities and to help develop their bodies; whereas grown-ups use toys to strengthen social bonds, exercise their mind and body, and decorate their living spaces. Toys are more than a means of simple amusement and have a profound effect on most aspects of life. Moreover, their use by a growing proportion of the population influences the economy vastly.

Toys are no longer just child's play—these are big business. Today, there are ample opportunities for the electronics industry as toys become increasingly dependent on technology to provide key functionality and features. The electronic toy making industry consists of electronic games, video game consoles, technology-driven educational and learning toys, drones, robots and more. Over the years, the toy industry in India has witnessed a plethora of changes in terms of innovation, design and technology used. The increasing shift from traditional to electronic

toys due to exposure to technology at an early age has led to the increasing demand for technologically-driven toys. Therefore there is scope for the industry to thrive and sustain.

Market perspective

India's urban population is the second largest in the world—larger than the combined urban populations of all countries except China, the US and Russia. India has more than 800 Indian toys and games manufacturers, suppliers and exporters, most of whom hail from the unorganised sector. The Indian toy industry, fuelled by the vast domestic market, has now turned its attention to global markets and is fast gearing up to meet international standards and demands.

The Indian toy industry is driven by skilled workforce, diverse product range, growing innovation and creativity, and emphasis on technology-driven learning and education. It is set to grow at 25 per cent in the coming years and is beginning to export to a few developed nations around the world. The worldwide market for toys is huge and
